View at Glen Saint Mary Nurseries

Foreword

HIS catalogue comes to you as the Glen Saint Mary Nurseries are entering upon their thirtieth year. The proprietors take considerable pride in the book—both because of its attractive appearance and of the practical nature of its contents.

We have even greater pride in the fact that the plants, shrubs and trees which we offer for the fall of 1911 and spring of 1912, are fully up to the standard of quality heretofore established by Glen Saint Mary Nurseries, and even better wherever there has been opportunity for improvement.

Our interests are your interests—your patronage puts us under an obligation of which we are keenly appreciative. We confine ourselves exclusively to the nursery business in order that we may continue to deserve your favors. No diversion of our energies into other channels, however worthy these may be, will be allowed to interfere with the close attention to every detail of propagation, cultivation and shipping through which we have been able to maintain the reputation of Glen Saint Mary Nurseries.

The development of the Gulf Coast States goes on apace. This section of the country, so favored by nature, is rapidly coming into its own in the way of commercial importance. Throughout its borders the trees, etc., that have been supplied by the Glen Saint Mary Nurseries are found—many now in full maturity—and in no small degree these have contributed to the present prosperity. To still further contribute to the best interests of our field, by the means we have employed heretofore, will be our aim; no other enterprise will be permitted to absorb us to the slightest degree.

To our old customers, nothing need be said regarding the methods of Glen Saint Mary Nurseries, or the plants, shrubs and trees they produce. New friends may be interested to know, however, that we make the most exhaustive tests of a variety, as to its adaptability to this section of the country and as to its general worthiness, before offering in our catalogue. Once convinced of the merit of the fruit, we propagate and grow in a sandy loam underlaid with clay—the most desirable soil combination for producing thrifty, sturdy plants—and under the direction of experts.

Each department of our business is in charge of a specialist in his line, who has no other interest than to grow and ship the strongest possible trees. Mostly these men have been in our employ for years, and in every case they have made a special study of the tree needs of the Gulf Coast and Southern States generally. Upon these notable advantages—proper selection of varieties, ideal conditions for growing, expert help and exclusive devotion to the one business—we base our claim for the patronage of every planter who seeks the greatest value for the money he invests. The best quality obtainable has been our effort ever since we entered the nursery business—and our friends may be assured that their interests will be safeguarded in all that they order from us hereafter.

GLEN SAINT MARY NURSERIES CO.

G. L. TABER, *President*

Glen Saint Mary, Florida

Citrus Fruits

In planting Citrus Fruits, three things are of primary importance—soil, climate and trees.

Good judgment must be exercised in the selection of a location, that the trees may be set in ideal surroundings, for no amount of expense and labor will overcome unsuitable conditions. Prepare the soil well; this is easier done before than after planting.

Having selected a good soil and a suitable location, it is essential that good trees be procured. These should be well grown with clean, smooth trunks, not stunted nor bark-bound, but vigorous, thrifty trees. They should be free from insects and diseases, carefully dug and carefully packed, so as to reach the planter in good condition. Given the right sort of care, and planted properly in well prepared soil, these are the kind of trees which will give the best results.

In addition to all this, the trees must be "true to name," for no one can tell until they come into bearing whether they are or not, and success or failure depends on their genuineness. In growing our trees, we spare no expense in producing the best that can be grown. We produce trees to fill the conditions set forth above. Our constant aim is to secure quality, for the purchase of cheap, poorly grown, mixed trees is the most expensive investment that can be made. It is not the cost of trees that counts, but the expense of planting and after care.

Unless otherwise instructed, all Citrus trees are trimmed ready for planting before shipping.

Trees on Sour Orange and Rough Lemon Stocks

For general planting in the Citrus districts, Sour Orange stock will be found most satisfactory. It is adapted to a wide range of territory and conditions, but prefers rather heavy soil and a good supply of moisture. Its habit of developing a deep root system, its thrifty vigorous growth, its hardiness, its immunity from foot-rot, and its general adaptability to different varieties of Citrus fruits, are all strong points in its favor and well worthy of note.

Rough Lemon stock produces a very strong growth of bud placed upon it. It is recommended for plantings on dry soils and in those localities where either lack of moisture or trying soil conditions render the use of Sour stock inadvisable. It is particularly adapted to deep sandy soils. Most shy-bearing varieties are much more prolific on Rough Lemon stock. It cannot be recommended for the colder sections.

Varieties on Sour Orange and Rough Lemon

Boone's Early, Carleton, Centennial, Dugat, Enterprise Seedless, Hart's Late, Homosassa, Jaffa, King, Madam Vinous, Magnum Bonum, Majorca, Mediterranean Sweet, Nonpareil, Old Vini, Parson Brown, Pineapple, Ruby, Sweet Seville, Tangerine, Valencia Late, Washington Navel, Duncan, Hall Silver Cluster, McCarty, Marsh Seedless, Pernambuco, Triumph, Kenedy, Ponderosa and Villa Franca.

GLEN SAINT MARY NURSERIES

Citrus Fruits

Trees on Citrus Trifoliata Stock

Citrus trifoliata is the hardiest species of Citrus known in this country. It is deciduous, grows well in the open ground as far north as Washington, D. C., and withstands temperatures of 15° below zero and lower.

It has become of great importance as a stock for citrus trees of all kinds. Varieties budded on it are made hardier because of its dormant and hardy character, and the fruit is of exceedingly fine quality, ripening two or three weeks earlier than if budded on other stocks. It has been claimed that it dwarfs the trees budded upon it, but the tests of years in our test-groves have not proven this to be so except in the case of a few varieties. For the Satsuma orange, it is the only stock to use.

Citrus trifoliata is adapted for planting on alluvial lands, clay lands, soils underlaid with clay and those which naturally contain plenty of moisture or to which water can be applied by irrigation. It should not be planted on high, dry, sandy lands lacking in moisture. On such soils it is a failure.

Seedlings can be used as a hedge, and it forms an impenetrable barrier to man or beast, and, with proper care, can be made rabbit-proof.

Varieties on Citrus Trifoliata Stock

We do not attempt to propagate all our varieties on *Citrus trifoliata*, and carry only a select list of those varieties which our experience has proven will give satisfaction on this stock. Our list of varieties is as follows, though we can supply a few trees of nearly all varieties in our list on special request: Carleton, Double Imperial Navel, Dugat, Homosassa, Jaffa, King, Madam Vinous, Magnum Bonum, Mediterranean Sweet, Nonpareil, Old Vini, Parson Brown, Pineapple, Ruby, Satsuma, Tangerine, Valencia Late, Washington Navel, Duncan, McCarty, Pernambuco, Kenedy, Ponderosa, Villa Franca and Kumquats.

ORANGES

In order of ripening, varieties may be arranged about as follows: *Very early*—Boone Early, Satsuma, Sweet Seville. *Early*—Centennial, Dugat, Enterprise Seedless, Nonpareil, Parson Brown, *Medium*—Homosassa, Jaffa, Madam Vinous, Magnum Bonum, Majorca, Old Vini, Pineapple, Ruby, Tangerine, Washington Navel. *Late*—Mediterranean Sweet, Navelencia. *Very Late*—Lue Gim Gong, Hart Late, King, Valencia Late. Blood markings do not appear till late in the season. Some varieties hang on the tree and improve in quality after they first become marketable.

Boone (Boone's Early). Medium size; good quality. One of the most valuable extremely early varieties. Unlike most early varieties, it colors up as soon as ripe.

Carleton. Round or somewhat oval, with smooth, bright skin; juicy and of high quality. Early, seedless. Originated in the grove of Mr. Albert Carleton, Wauchula, Fla., from whom we secured our original buds on the condition that it should be introduced as Carleton.

Centennial. Ripens early, but hangs on the tree well, and is of fine quality late in the season. Is a vigorous grower and prolific bearer.

Dugat. This variety has been grown in southern Texas for several years, where it is highly esteemed as one of the hardiest varieties and of excellent quality.

Double Imperial Navel. A medium-sized round navel orange, with smooth, bright, golden yellow skin; juicy and of excellent quality. It

GLEN SAINT MARY NURSERIES

Citrus Fruits

usually has a few seeds, 4 to 6. This variety has fruited so well on *Citrus trifoliata* stock that we have decided to propagate it on this stock. It has proven very hardy. Ripens in November.

Enterprise Seedless (Starke Seedless). Size medium; quality fine; seedless, or nearly so. Tree vigorous and productive. Early.

Hart (Hart's Late). Of medium size; round or slightly oval; smooth; very solid and heavy, the flesh being very firm; quality good; peel of lightest cast; few seeds. The tree is very strong, spreading and a vigorous grower; prolific; the foliage is distinct; but few thorns. Ripens in April. Hangs on the tree in good condition until midsummer.

Homosassa. Size about medium; round, somewhat flattened; very heavy; color bright; skin very smooth, thin, tough and dense; pulp fine, sweet and juicy; flavor full, vinous and sprightly; membranes covering segments of pulp thin and small in quantity. Keeps and carries well. Tree vigorous and prolific.

Jaffa. Medium to large; peel thin; pulp melting, scarcely any fiber; juicy, rich and of exquisite flavor. In quality unsurpassed, being one of the four or five varieties which heads the list in all competitions. The fruit remains on the tree in prime condition for a long period. Tree a strong, upright grower of distinct habit, practically thornless; a prolific bearer when it has attained sufficient size to hold good crops.

King. Very large, flattened, and with loosely adhering rind and segments; color orange-red; skin tough, but general appearance fine; its high and peculiar aromatic flavor is very agreeable; it has few seeds; flesh deep red-orange, juicy, meaty; inner lining of rind and membranes bright buff. Tree upright; strong grower; quite thorny. March, April and May; keeps in good condition even later.

Lue Gim Gong. For description of this new and meritorious variety, see page 7.

Madam Vinous. Medium to large; skin smooth and thin; quality fine. One of the best of the numerous good varieties from the Indian river section of Florida. Ripens midseason.

Magnum Bonum. Size large to very large; flattened; color light, clear orange; skin smooth and glossy; color of flesh light; grain very fine, tender and melting; fruit heavy and juicy; excellent shipper; quality best. Prolific and vigorous.

Majorca. Medium size; round; rich, juicy and sweet; equals Jaffa in quality; its characteristics being similar to that variety. It is a good keeper and shipper. Tree a strong, bushy grower, very robust; foliage very distinct; nearly thornless; a fine bearer.

Mediterranean Sweet (Sanford's). Large size; smooth rind; quality good. Ripens late. One of the best of General Sanford's introductions.

Nonpareil. Size medium to slightly larger, somewhat flattened; grain fine, pulp melting and tender; juice subacid and vinous; quality best. Tree vigorous and prolific. A very desirable early variety.

Old Vini (Beach No. 4). Medium, slightly flattened; color dark orange; pulp melting; juice subacid; pleasant sprightly quality.

Pineapple Oranges

Pineapple. A most excellent variety, which has, during recent years, attained and very justly so, a great amount of prominence. The tree is a very strong, upright grower; prolific. Fruit medium to large; peel thin but tough, very smooth and bright; heavy, juicy and of excellent quality. We consider this one of the best round Oranges, and recommend it as one of the most profitable sorts for extensive planting.

Parson Brown. Size medium, round or slightly oblong; peel smooth, texture fine; quality good. Keeps and ships well. One of

Citrus Fruits

the best of the early varieties. Begins to ripen in October.

Ruby. Medium-sized, nearly round; skin thin but very tough; pulp melting, rich, juicy and of exquisite flavor; quality unsurpassed. As the fruit ripens it usually becomes streaked or mottled with blood-red; often the entire pulp gets ruby-red, showing through the peel in a reddish blush on the outside. Ruby is the best of the blood Oranges, and its eating quality is good before the markings show. The tree is vigorous, nearly thornless, and a regular bearer. We esteem this one of the most valuable varieties for general planting.

Satsuma (Synonyms: Oonshiu, Kii Seedless). Of medium size; flattened; loosely adhering rind and easily separated segments like all other varieties of the Mandarin (*Citrus nobilis*) group; the color is a deep yellow; flesh fine-grained, tender, juicy, sweet and delicious; entirely seedless. Ripens in September, October and November. Tree of somewhat smaller growth than other Oranges, and is of unique habit. Entirely thornless. Bears when very young. This is undoubtedly the hardiest known variety of edible Orange, and this, in connection with its early ripening and fine quality, makes it an exceedingly valuable sort. We are growing it largely

in our own Orange groves at Glen Saint Mary, in northern Florida, and are probably the largest propagators of this variety in America. When budded on *Citrus trifoliata* it is the best variety for general planting throughout northern Florida and the Gulf coast Orange region generally.

Sweet Seville (Sanford's). Size medium, round; a good keeper and shipper; sweetens first of the early kinds, and is known distinctly as a sweet Orange. Tree vigorous and prolific.

Tangerine (Dancy's). One of the well-known "kid-glove" Oranges; belongs to the Mandarin group. Flat, small to medium; skin separates freely from the flesh; juicy, aromatic, and rich, of a deep red color. Particularly good grower and prolific. December, January and February.

Valencia Late. A very late and very prolific variety of fine quality. Season May and June, but fruit will hang on trees till August or September. Fruit of good size, oval or rounded in shape; juicy and tender.

Washington Navel. Like other Navels, bears a peculiar umbilical formation on the summit or blossom end of the fruit; this protuberance is not so prominent as in some varieties of Navel Orange. The fruit is large to very large, somewhat oval; flesh meaty, tender, sweet and highly flavored; an exceptionally luscious fruit.

Satsuma Oranges

The Lue Gim Gong Orange

This season we are introducing to our customers a new Orange, known as Lue Gim Gong, a late round Orange of unusual merit. During the past quarter of a century or more, a number of new varieties of fruits have been introduced by the Glen St. Mary Nurseries. As a rule, these varieties of fruits of different kinds have made good, and some of them are today the leading varieties in the regions to which they are adapted. We are confident that the Lue Gim Gong Orange will become the most noted late Orange in the country. It will far surpass in value and in reputation any other variety of any kind of fruit we have ever introduced.

ORIGIN. In 1886 Mr. Lue Gim Gong, De Land, Fla., pollinated Harts Late with pollen from what was believed to be a Mediterranean Sweet Orange tree. One Orange containing fifteen to eighteen seeds resulted from the crossing. From these seeds about twelve trees were raised, no two of which proved to be alike.

The variety now called Lue Gim Gong, when it came into fruit, seemed to be such an improvement on Harts Late that Mr. Lue budded fifteen trees with this variety on one side, and Harts Late (Tardiff) on the other. About thirty other trees were budded with this variety on one side, and other varieties on the other. Five trees are now solid.

DESCRIPTION. Size large, packing 126 to 176 per box; form oblong, carrying the size well out to the rounded ends; color deep orange-red; skin thin, smooth on current crop, becoming rougher on two- and three-year-old fruit; sections well defined, ten or eleven in number; flesh deep orange; juice sacks large; juice abundant, even in old specimens; seeds few, usually four to eight; flavor a rich blending of sweet and sub-acid; quality best. A fine shipping fruit and a good keeper. Tree and fruit both very hardy and resistant to cold.

COMPARISONS. At this time, Harts Late is the standard late Orange of Florida, and it may therefore be well to make comparisons between this new variety and the standard sort. On July 6, 1909, Mr. Lue took fifteen boxes of Harts Late (from one side of above trees) to the packing-house and, after testing for specific gravity by placing them in water, packed five boxes out of the fifteen. These were considered to have enough weight for shipping. The five boxes were shipped to North Adams, Mass. Upon arrival, they had to be repacked at a cost of 35 cents per box, and then only three boxes remained, which sold for \$2.50 per box.

At the same time, five boxes were picked of the Lue Gim Gong Orange from the other side of the same trees. The fruit was not tested for specific gravity, and all the fruit was shipped. On arrival at North Adams, they did not require repacking, and the whole five boxes brought \$4.50 per box.

The Lue Gim Gong Orange is a hardy, thrifty-growing variety. It can be marketed to advantage in August, September and October, when other varieties are out of season, and when the only fruit on the markets is Valencia Late, from California.

Mr. Lue Gim Gong and One of His Trees

Citrus Fruits

The fruit hangs on the trees with very little dropping through the rainy season, which in Florida usually begins in June and lasts several weeks. The fruit has been known to hang on the trees, one, two and even three years, in an edible state. There is no question but that this variety marks the beginning of a new era in late Orange culture.

So convinced are we of the merits of this Orange that we have entered into a contract with Mr. Lue Gim Gong for control of the variety. The contract price for the variety we believe far exceeds the price paid for any other Orange, or for any other fruit ever propagated in America. We are preparing to plant heavily of it ourselves in the southern part of the state.

The tree is hardy and vigorous. Planted in the grove of Mr. Lue Gim Gong, near DeLand, Fla., with other varieties of Oranges, it has stood the cold for years past better than any other variety in the grove, and has passed through the several cold snaps practically without injury. The fruit is well distributed over the tree, and it bears well when carrying the crop from the previous year. This is unusual, for, in the case of most varieties of Oranges, if the crop is allowed to hang on the trees until late in the season, the following crop will be light. In habit of growth, the tree produces a well-rounded head, low and spreading, rather than high and upright.

The remarkable feature about the Lue Gim Gong Orange is the way the fruit hangs on the trees. The fruit could be shipped in June, though still a little too acid. It is good in July, but better in August and September. The fruit is full of juice, and hangs on the trees through the rainy summer weather. It can therefore be placed on the market when Oranges are scarce and the highest prices obtainable can be secured. The fruit is of good market size, ships and keeps well.

Testimonials

The merits of the Lue Gim Gong Orange are recognized by all who have become acquainted with it. We might publish a large number of testimonials, but the following from some of the men prominent in citrus fruit circles will suffice to show how it is regarded by those who know the fruit.

Mr. W. C. Temple, Tampa, Fla., Secretary and Business Manager of the Florida Citrus Exchange, has done more to systematize the selling of Florida Citrus Fruits than any other man in the state. His ability as a grower and a packer of Oranges and grapefruit is too well known to need comment. Under date of June 17, 1911, Mr. Temple wrote us as follows:

"Answering your favor of June 12, would say that I have several times in the last three years had occasion to investigate, test and sample the Lue Gim Gong Orange, and would say that I consider it a marvel in the citrus family. I have

Telling the Story of the New Orange

eaten repeatedly Oranges from the Lue Gim Gong tree that had been hanging matured for two years, and only today ate some that bloomed in February, 1910, which put them through the cold snaps of December, January and February of the past season; and, although those Oranges are grown in a vicinity where much frost damage was done, they show no effect of frost whatever, being sound, solid and full of juice. I myself wish to get some of these Orange trees just the minute you are ready to put them on the market, as I wish to bud a considerable portion of my 'Alabama' grove into this variety, as in my opinion the Lue Gim Gong Oranges will give to Florida what California alone now enjoys, viz., an all-the-year-round Orange."

THE LUE GIM GONG ORANGE

INTRODUCED BY
GLEN SAINT MARY NURSERIES

*An orange which is bound to revolutionize the growing of oranges
in Florida and adjacent citrus sections*

GLEN SAINT MARY NURSERIES

Citrus Fruits

An extract from a personal letter from Mr. W. S. Hart, Hawks Park, Fla., sets forth his opinion of the Lue Gim Gong Orange. Mr. Hart has for years stood for all that is best in citrus fruit-growing in Florida, and no man is more competent to pass on the merits of a new variety. He says:

"During the past two seasons, I have had some opportunity to study the peculiar merits of the Lue Gim Gong Orange, and I can honestly say that I have become convinced that it is the most promising money-producing proposition for the citrus-grower now in sight."

Mr. H. B. Stevens, General Manager of the John B. Stetson Estate, DeLand, Fla., one of Florida's most noted citrus-growers, has known the Lue Gim Gong Orange for a number of years past. In reply to our letter of inquiry, he writes as follows:

"You ask what I know of the Lue Gim Gong Orange. In reply, will say that I had my attention called to it several years ago, and have watched it quite closely ever since. Have come to this conclusion, that it stands more cold, both as a tree and as to the fruit, than any other Orange I have had any experience with. I have noticed that the fruit on the side budded to that variety stands more cold than the Hart's Late budded on the opposite side of the same stump. It holds its juice late in the season, better than any other Orange I know of, and bears well. Can not see that the fruit remaining on the tree as late as it does seems to affect the amount of crop the next year. Taking it altogether, I think it promises to be one of the very best varieties we can have."

Col. G. B. Brackett, Pomologist, United States Department of Agriculture, Washington, D. C., has for years been identified with the fruit industries of the country, and has had an opportunity of examining more varieties of fruits than any other man in America. Colonel Brackett was chairman of the committee which awarded a Wilder Silver Medal from the American Pomological Society for the Lue Gim Gong Orange. He says:

"I have examined the specimens carefully, and upon their merits I have given my approval for the variety a Wilder Silver Medal, and have so informed (the Secretary) Prof. John Craig. I am having a painting made of the variety for placing on file here. This is a rare good Orange, and I am glad you are taking an interest in it. . . . This fruit is worthy, and I am glad to recognize its value by medal award."

Wilder Medal. The most noted horticultural organization in the country today, as it has been for the past sixty years, is the American Pomological Society. This Society, recognizing the merits of the Lue Gim Gong Orange, awarded a Wilder silver medal to this variety. We believe this is the first time a Wilder medal has been awarded for a new variety of Orange since the Society was organized, and gives a fair idea of the estimation in which this fruit is held by experts.

To every tree of this Orange sent out, a facsimile reproduction of the Wilder Medal, awarded by the American Pomological Society for the Lue Gim Gong Orange, will be fastened. This marks the tree as genuine stock—Glen Saint Mary grown.

PRICE.—The price of Lue Gim Gong Orange trees will be \$3 per tree, regardless of size or number of trees purchased. The trees will be graded in our regular sizes, 2 to 3 feet, 3 to 4 feet, 4 to 5 feet and 5 to 7 feet grades. The earliest orders received will be filled with the largest sizes, and will be handled strictly in rotation. They will be pruned for planting before being sent out. Trees mostly on sour-orange stock. We can furnish a limited number on *Citrus trifoliata* stock.

While the price may be considered high by some, when compared with prices on other varieties, yet, when the real merits of the variety are considered, the price is low. Never, we venture to say, has a fruit tree of equal merit been presented to the public and sold at so low a figure. The first box of Oranges shipped out of the usual orange season in August or September will pay, or more than pay, for the tree which bore it.

Duncan Pomelo

POMELO. Grapefruit

The Pomelo, or Grapefruit, as it is commonly called in the markets, has taken a place in citrus fruit culture beside the orange as an important market fruit. Its use is increasing from year to year, and it has become, par excellence, the breakfast fruit of America. No fruit compares with it in refreshing, appetizing qualities, and to those who have learned its merits it is indispensable—it becomes a necessity.

While many varieties of Pomeles have been named and introduced, we are listing only a few of those which experience has proven to be the most suitable for general planting. Duncan is, in our experience, the hardiest of all. It will stand as much cold as the hardiest of the sweet oranges. Along the Gulf coast it has given an excellent account of itself, and we are propagating it largely on *Citrus trifoliata* stock. Marsh Seedless is a good variety for general planting and is highly regarded because of its being seedless or nearly seedless. The tree is low and spreading. McCarty, a new variety introduced by us a few seasons ago, is noteworthy because of its exceptional quality, the fruit being smooth and velvety, but the strong point in its favor is that it is borne scattered over the tree and not in bunches. Pernambuco, an introduction from Brazil, is an excellent fruit, and the planter can make no mistake in using it over the larger portion of the Pomelo belt. Triumph is valuable as an early fruit, and for home use. Hall's Silver Cluster is a good variety, but bears its fruits in large bunches, and the fruits are stained and unshapely in consequence. It is not so hardy as Duncan.

To the planter of citrus trees the Pomelo commends itself because it comes into bearing early and bears extremely heavy crops. It is not too much to say that the Pomelo tree will bear more fruit per tree than any other citrus tree.

We have given particular attention to the growing of Pomelo trees for many years. In our test grove we have the different varieties in fruit, and are, therefore, in position to speak definitely concerning their merits and to know definitely that our stock is genuine.

GLEN SAINT MARY NURSERIES

Citrus Fruits

Duncan. Of large size; peel tough and smooth; quality very best; regular old-fashioned Grapefruit flavor. Strong grower and regular and prolific bearer. We recommend this variety without the slightest hesitation as being one of the finest, also one of the hardiest varieties. Hangs on trees and keeps in fine condition until late spring or early summer.

Hall (Hall's Silver Cluster). Medium to large, nearly round. Good quality, heavy bearer, large bunches.

Marsh Seedless. Large size, slightly flattened; skin very smooth; heavy, juicy and of excellent quality. Nominally seedless, it generally has a limited number of seeds. Desirable.

Pernambuco. A large Grapefruit with very smooth light-colored skin. A good bearer. The fruit is of excellent quality and handsome appearance. It ripens late and hangs on the trees well. Imported from Brazil by the United States Department of Agriculture, some years ago.

Triumph. Medium size; skin smooth; heavy; juicy, well-flavored; less bitter than some others. A strong grower, prolific. This is the earliest variety of Grapefruit we have, and for home use and for some markets it is excellent. It cannot be recommended for planting in the colder sections, as the tree is tender. Fruit not large enough to suit many growers.

New Pomelo, McCarty

THE POMELO THAT BEARS ITS FRUITS SINGLY

For many years we have had under observation a Pomelo of the famous Indian River strain, a late-maturing variety of unsurpassed quality. The fruit is waxy, yellow color; of large size, packing 48 to 64 per box. The tree is vigorous, healthy and prolific. The striking peculiarity of the variety is that the fruit, almost entirely, is borne, not in bunches, but singly, and well distributed over the tree. This is a valuable feature.

The flavor is a perfect blending of sweet, acid and bitterness, the true Pomelo flavor. The flesh is melting, free from fiber and rag; seeds about the usual number.

We have named the variety McCarty, in honor of the late Mr. C. T. McCarty, one of Florida's most noted horticulturists. The original tree is growing at the McCarty home at Eldred, Florida, and we believe it to be well worthy of his name.

PRICES ON NEW POMELO, McCARTY.—On Sour Orange and Citrus trifoliata stock.

KUMQUATS

The Kumquat, or Kin-kan (*Citrus Japonica*), the smallest of the Citrus family, is a hardy shrub, reaching a height of 10 to 15 feet. A handsome plant, with dark foliage and golden fruit.

Kumquats equal the Satsuma orange in hardiness, and should be planted with it. On *Citrus trifoliata* stock, it will withstand a temperature of 15° Fahr. without injury. The fruit sells at a fancy price, \$6 to \$10 per crate, and, if carefully marketed, it is a very profitable fruit to grow.

The fruits should be picked with leaves attached, packed tastefully in quart baskets, and shipped in strawberry crates. They are eaten without removing the rind, and make excellent preserves, marmalades, jellies and crystallized fruit. We propagate only on *Citrus trifoliata* and Rough Lemon stock, as they do not grow well on Sweet or Sour Orange roots.

McCarty Pomelos
on the trees

Citrus Fruits

Nagami. Fruit oblong about $1\frac{1}{2}$ to 2 inches in length and 1 inch in diameter; fruit golden yellow; rind sweet; pulp and juice sprightly, of fine flavor. Tree forms a nice head and grows quite symmetrically; a little more open than the Marumi but still compact. Leaves are a trifle larger than those of Marumi.

Marumi. Fruit round, about 1 inch in diameter; bright golden yellow. Rind sweet, with a pleasant flavor and pulp and juice sprightly; quality very fine. Tree forms a beautiful, well-rounded, symmetrical head even when quite young, and always retains this shape. Ripens two to three weeks before Nagami.

Gathering Kumquats at Glen Saint Mary Nurseries

LEMONS

Villa Franca. Medium size; rind smooth, thin and sweet; juicy; acid very strong and of fine quality; tree has but few thorns and is a vigorous grower and very productive. Fruit a good shipper. One of the very best; has taken first rank in many competitive exhibits.

Kenedy Lemon

New Lemon, Kenedy

A LEMON ALL JUICE AND THE JUICE ALL ACID

This fine Lemon originated on the ranch of Mr. John G. Kenedy, Sarita, Texas. In the winter of 1908, our President, Mr. G. L. Taber, visited the original tree and, with Mr. Kenedy's assistance and under his supervision, cut buds from the tree which Mr. Kenedy said was the best and should be known as Kenedy. Buds had already been cut indiscriminately from this and four other seedling Lemons, and the whole mixed lot is now being grown and disseminated as Kenedy Lemon. We are pleased to introduce the true variety of this name. It is a Lemon of good size and considered hardy, quite or almost seedless, beautiful, smooth

with very thin rind and solid flesh. The tree is prolific and thrifty.

Analysis of the fruit by Prof. W. A. Blair shows 68.69 per cent juice and 7.40 per cent citric acid. This marks it a Lemon of unusual merit.

LIMES

Limes can be put to all the uses for which the lemon is adapted. The flavor is different from that of the lemon, but is highly appreciated by every one who has used the fruit. In tropical countries they are in more general use than lemons.

Lime trees are vigorous growers and in suitable climates bloom and bear continuously throughout the year. It must be remembered that Limes are very tender trees. We are growing them only on sour orange and rough lemon stocks. They grow well under very adverse conditions.

Persian. Large size, about the same as an ordinary lemon. Smooth, very juicy, with strong, clear acid. Tree grows stronger and is a good bearer. A desirable Lime.

Citrus Fruits and Their Culture

By H. HAROLD HUME

This work is heartily endorsed by the leading growers of citrus fruits. The subject of citrus-fruit growing is thoroughly covered in all its phases, from the preparation of the land and the planting of the trees to the marketing of the fruit. For the grower engaged in the production of first-class oranges, pomelos (grapefruit), or lemons, it is an invaluable book. It contains 597 pages, well illustrated with line drawings and half-tone engravings. Price, postpaid, \$2.50.

PECANS

In recent years the Pecan has become a very important nut, particularly in the Southern States, and it may be said that there is no other fruit or nut tree which fits so well into the general farming of this region as the Pecan. Cotton, corn, cowpeas and other farm crops can be grown to advantage among the trees when they are young, and even until the trees have begun to bear well. In short, the land may be farmed almost as though the trees had not been planted on it, yet the trees, under this management will grow and do well. The region in which the Pecan may be grown, with a proper selection of varieties, extends from Virginia to Florida, thence west into Texas and Oklahoma. It is destined to become the most important horticultural tree in this whole region, and the pecan orchards of the South will rival the apple orchards of the North and Northwest. The Pecan, under proper conditions, will continue to bear fruit long after other fruit trees planted at the same time have ceased to grow; in fact, a Pecan orchard is equal to many peach orchards—for instance, in length of life and fruitfulness. As shade trees they make handsome specimens, and they are well adapted for street, road and yard planting.

Pecan Soils

While it is a fact that the Pecan tree will succeed on a wide range of soils, it is wise, since it is a valuable, long-lived tree, to choose good land for the Pecan planting. This soil should not be low and wet; it should be well drained, yet it should contain a goodly supply of moisture. Sandy loams underlaid with clay, light clay lands and alluvial lands are suitable. The land should contain humus in goodly amounts for best results. Before planting, the land should be thoroughly cleared of stumps and roots; if it is a good farm land, and in good farming condition, it will be ready for planting at once, but new lands or those deficient in humus or vegetable matter should be broken well, and planted in cowpeas or velvet beans for at least one season before planting. In autumn, after the vines are dead and dry, they should be plowed back into the land and the soil well harrowed, to put it in best condition.

Planting

Pecan trees should not be set closer than 40 feet apart each way, and from this distance up to 50 feet will be found about right for most soils. The best season for setting the trees is immediately after the leaves fall in

A Barrel of Van Deman Pecans

GLEN SAINT MARY NURSERIES

Nut Trees

autumn. December and January are good months, though the planting season may be continued through February or even March if there is good moisture in the soil. In planting, it will always be found best to set trees of good size, provided they are vigorous and thrifty. Preference should be given to trees of 4 to 5 and 5 to 7 feet grades, as they will give better satisfaction than smaller sizes.

The ground should be carefully staked out, a stake being set for each tree. The holes should be dug wide and deep. In planting the trees, set them at the same depth as they stood in the nursery rows. Pack the earth close and tight around the roots with the hands. The roots must be well covered with damp sacks or burlap to keep them from the sun and wind. Any broken roots should be cut back or cut off before planting. The tops of young trees need not be cut back, but trees grading 5 to 7 feet or 4 to 5 feet and up should have the tops cut. If the season is dry, it will be found a good plan to mound the earth up around the trunks, using clean soil, free from weeds and trash.

Cultivation

The best cultivation for a Pecan tree does not differ materially from that given other kinds of fruit trees. The orchard should be plowed during winter. Cultivation should begin early in spring before growth starts and should continue at intervals of a week or ten days until about the first of July, when cultivation may be discontinued. If the land is planted in truck or farm crops there should be a strip of 5 or 6 feet on each side of the tree rows left unplanted. The strip should be cultivated regularly, to conserve moisture and keep the trees in good growing condition. In six to eight years after planting, the trees will begin to bear light crops, and by ten years they should be yielding fairly well. After this, it is doubtful whether it is good practice to continue cropping the land, both because the trees need the land and because the shade cast by them will interfere with the crops. Indeed, cropping may have to cease earlier, particularly if the trees are closely planted. Crops of cowpeas, beggarweed or other suitable legumes should be grown from time to time and turned into the land. Fertilizers can be used to advantage. A good fertilizer for young trees is one containing about 4 per cent nitrogen and 6 or 7 per cent each of phosphoric acid and potash. For bearing trees the potash should be increased to about 10 per cent. Stable-manure in moderate quantities can also be used to advantage and wood ashes are good.

Marketing Pecans

The Pecan crop should be harvested as soon as a majority of the burs are open, showing the nuts. The trees should be stripped of their crop at one picking. After gathering, remove the husks

A block of Pecan Nurserv stock

Pecan Grove

and spread out in shallow trays in the sun to dry. They should be removed to a well-ventilated storage room at night. It will take several days of drying, out-of-doors and in the house, before they are ready to pack. The variety should form the basis of the grade. If irregular in size, they should be screened and divided into different sizes.

At the present time practically all the Pecans of improved varieties are sold to a private trade. Hardly any of them as yet find their way into the general market, as the supply is so far short of the demand. For quantity shipments, good clean barrels are best; for smaller packages, neat wooden or corrugated paper boxes are most satisfactory.

VARIETIES DESCRIBED

Curtis. A medium-sized Pecan, with bright, clean shell, marked with a few purplish specks; ovate, rounded at base, pointed at the apex; shell very thin; cracking quality excellent; kernel light yellow, plump and full; rich, sweet, nutty flavor; quality best. A desirable nut for home use or market. A regular bearer.

Delmas. Size large, ovate; dark gray in color, marked with dark specks and streaks; shell medium thick; cracking quality good; kernel bright yellow; flavor sweet; quality good. The earliest bearer.

Frotscher. A large, oblong nut, $1\frac{3}{4}$ or $1\frac{7}{8}$ inches in length; bright yellowish brown in color with a few purplish black markings; shell very thin, cracking easily. Kernel large, easily removed, full, of good quality. One of the hand-

somest nuts grown. Tree a vigorous grower, of spreading habit with scaly bark; bears heavy crops. We have been propagating this variety for years from bearing trees grafted by ourselves with scions cut from the original tree in Louisiana.

Russel. A medium- or large-sized nut, $1\frac{1}{2}$ to $1\frac{3}{4}$ inches long, oval and pointed; grayish brown, with numerous small, purplish black markings. Shell thin, of excellent cracking quality; kernel plump and of good quality. A good grower with small, clean, characteristic foliage.

Schley. Size medium to large, $1\frac{1}{2}$ to $1\frac{7}{8}$ inches long; oblong, somewhat flattened; light reddish brown with a few small markings of purplish brown; shell thin, separating easily from the kernel; kernel full, plump, bright yellowish brown in color; flavor rich, nutty; in

GLEN SAINT MARY NURSERIES

Nut Trees

quality one of the best. Tree a good grower and on the whole a very excellent variety.

Stuart. Nuts large or very large, $1\frac{3}{4}$ to 2 inches, long; oblong; brownish shell, strongly marked with dark color. Shell of medium thickness and of very good cracking quality. Kernel full, plump, bright colored. Best quality; flavor rich and sweet. Heavy bearer. Tree a strong grower, with large foliage.

Success. Size large, oblong, tapering to the blunt apex. Color reddish brown, with purplish markings; shell thin, cracking quality very good, partitions thin; kernel large, full, plump, yellow in color; flavor sweet, rich; quality very good. The tree is a good healthy grower and the

variety has much to recommend it. (Sold out for this season.)

Teche. Size medium to large, oblong; grayish brown in color, with a few dark streaks; base and apex rounded; shell medium thick; cracking quality very good; kernel full, plump; sutures broad and rather deep; quality good. A seedling of Frotscher.

Van Deman. Large to very large, from $\frac{7}{8}$ to $2\frac{1}{8}$ inches long, rather slender, pointed at both ends. Color reddish brown, with purplish brown markings. Shell of medium thickness; cracking quality excellent. Kernel full and plump, bright brownish yellow; flavor sweet and good. Tree is vigorous, healthy, with large bright foliage.

The Pecan and Its Culture By H. HAROLD HUME

Pecans are rapidly becoming one of the most important orchard trees in the South. In fact, for general planting they are entitled to first place because of their peculiar adaptability to many conditions and locations. The merits of this valuable nut are being recognized as never before, and the crop has gained a firm place in the markets of the country. To supply reliable information on Pecan-growing, this up-to-date work, touching every cultural detail, has been prepared after a number of years' careful study of the industry. The book is thoroughly practical and contains the information needed by every grower of Pecans. Second edition, 195 pages, cloth bound; price \$1.50, postpaid.

JAPAN CHESTNUT

The Japan Chestnut grows well in nearly all parts of the lower South, and makes handsome, spreading, dense-headed trees. The leaves are narrow, pointed, deeply notched, deep green above, light beneath. The nuts are large, usually from two to five or seven in a bur. The nuts are esteemed by most people and are very good, especially when cooked. The trees make handsome lawn specimens and are very desirable. They should be planted on well-drained, though moist soil of good quality for best results. They make a valuable addition to any collection of nut trees and should have a place in every fruit-garden throughout the region in which they may be cultivated.

3 to 4 feet.....	40	3 50

JAPAN WALNUT

In the development of the nut industry, the Japan Walnut is well worthy of a place in every planting, and no home orchard should be without a few trees. They should be planted on well-drained land—a sandy or clay loam with a clay foundation is well adapted. The tree is a vigorous grower and comes into bearing early. In habit of growth they are low and spreading, reaching a height of 15 or 20 feet, with a spread of branch of about the same distance. The leaves are large and handsome. The nuts are borne in clusters of fifteen to twenty. They have rather thick shells, with sweet, plump kernels of very fine quality. They make beautiful lawn or shade trees.

PEACHES

For twenty-nine years we have been studying Peaches. During this period we have originated and introduced a large number of different kinds. We have throughout this period been growing nursery trees, and the trees which we are producing for our customers are better than ever before. Our land is particularly adapted to the growing of fine Peach stock, and we are able to offer our customers the best trees that can be produced. They are well-grown, true to name,—in short “Quality trees” of the very best strains.

Varieties of Peaches should be carefully selected, to have them adapted to the section where they are to be planted. This done, good trees planted on new land with good drainage, and carefully cultivated, they bring quick returns, and are among the most satisfactory fruits that can be grown either for home use or for the market.

The types of Peaches are as follows: *Persian*, commonly planted in the North. *Northern Chinese*, which includes Elberta and related varieties, generally planted in the cotton-belt; well adapted to western Florida. *Spanish*, native varieties that have originated in Florida and on the Gulf Coast; adapted to the latitude of northern Florida. *Honey*, comprising the Honey and its seedlings, adapted to northern Florida, southern Georgia and westward around the Gulf; *Peen-to*, comprising the original Peen-to and the varieties originated from it; well adapted to Florida, tropical and subtropical regions. Jewel, the most important commercial variety in the group. *Oriental Bloods*, Red Ceylon, adapted to the same range as Peen-to, and Japan Dwarf Blood to the same territory as the Honey Peach.

VARIETIES OF PEACHES DESCRIBED

The abbreviations in parentheses below, following the names of varieties, indicate the race to which they belong. Thus, (Sp.) means that the variety belongs to the Spanish race; (Per.), to the Persian race; (N. C.), Northern Chinese; (Hon.), Honey; (P-to), Peen-to; (O. B.), Oriental Bloods. The dates given for the usual time of ripening are based on northern Florida.

Angel Peaches

Admiral Dewey. (Per.) Fruit of good size; skin deep orange-yellow, with crimson cheek; flesh clear yellow to the stone, juicy, melting, vinous; quality very good. June 1 to 10.

Alexander. (Per.) Large; highly colored; flesh greenish white, juicy, vinous, of fair quality; cling one of the earliest of the Persian type. About June 1.

Angel. (P.-to.) Large, rounded, slightly pointed; color yellow, washed with red, very handsome; flesh white, sweet, melting, juicy, subacid, of exquisite flavor, entirely lacking in bitter almond flavor; freestone. The tree bears while young, and is very prolific. It blooms a month later than Peen-to, thus escaping injury from frost in many sections. Highly recommended. June 20 to 30.

Belle of Georgia. (N. C.) Very large; skin white, with red cheek; flesh white, firm and of excellent flavor; fruit uniformly large and showy; free. Rapid grower, prolific. July 1 to 15.

Bidwell's Early. (P.-to.) A seedling of the Peen-to. Shape roundish oblong, with short, recurved point; size medium; skin creamy white, washed with carmine; flesh fine-grained melting, juicy and sweet, with slight noyau flavor; clingstone. Matures about the same time as Peen-to, but continues during a longer period; one of the most satisfactory Peaches to grow.

Bidwell's Late. (P.-to.) A seedling of Peen-to, originated at Orlando, Fla., and the best of the "Bidwell" varieties. Shape nearly round; size large; color yellowish white; flesh fine-grained, sweet and juicy; clingstone. Matures about three weeks later than Peen-to. Quality excellent. This has proved a sure bearer farther north in Florida than most other varieties of the same origin, and is one of the most desirable sorts.

Cabler's Indian. (Sp.) Medium size; skin mottled in shades of deep purple; flesh purple, with deeper purple veins; rich subacid; cling; very fine. Of Texas origin, and decided Indian type. July 15 to 25.

Carman. (N. C.) Of large size, resembling Elberta in shape; skin creamy white or pale yellow, with deep blush; flesh tender and of fine flavor; juicy freestone. Prolific bearer and profitable market variety. June 10 to 20.

Chinese Cling. (N. C.) Very large, globular; skin yellowish white, sometimes washed with red; flesh white, red at the stone, rich, vinous, excellent. Ripens July 5 to 15.

Climax. (Hon.) A seedling of the Honey, which it resembles, but larger and about ten days later. Fruit medium size, round, slightly oblong with a recurved point; pale yellow, washed with red; flesh yellowish white, melting, sweet and sprightly; quality excellent; freestone. Vigorous grower and heavy bearer. June 25 to July 5.

Colon. (Hon.) Large, roundish oblong; skin white, overspread with red; flesh white, streaked with red, sometimes almost solid red; very juicy, subacid, high-flavored, delicious; freestone. Remarkable among Honey derivatives for its snap and tone. Good grower and prolific. Introduced by ourselves in 1893-94. June 15 to 25.

Countess. (Sp.) Large to very large, nearly round; skin white; flesh white, tender, melting, juicy, vinous; excellent; free. Tree a very strong grower. Ripens July 15 to 20.

Crawford's Early. (Per.) Large; yellow, red cheek; flesh yellow, juicy and rich; free. A valuable market variety for northern and central United States peach-growing sections. End of June.

GLEN SAINT MARY NURSERIES

Deciduous Fruits

Crawford's Late. (Per.) Large; skin yellow, with red cheek; flesh yellow, fine quality; free. An old and very popular variety for marketing or canning. Last of July.

Dorothy N. (P.-to.) A seedling of Angel, and a very handsome Peach, of large size and fine quality. Shape nearly round, flesh yellow; rich sub-acid, of excellent flavor. It bears well, and is a valuable variety for Southern Florida. July 5 to 15.

Elberta. (N. C.) Very large; yellow, with red cheek; flesh yellow, juicy and high-flavored; free. One of the finest and most valuable varieties, and perhaps more largely planted than any other one variety in America. Succeeds in west Florida and throughout a wide range of territory northward, but not in south Florida. July 5 to 20.

Estella. (Sp.) Almost round, very large; skin yellow or greenish yellow, with full red cheek; flesh yellow; freestone. Tree vigorous and very productive. Originated in west Florida. Ripens September 1 to 10, just when there is but little southern fruit in market.

Everbearing. (Sp.) Commences to bear about July 1 and produces successive crops until about September 1. The fruit is creamy white, mottled and striped with light purple and pink veins; oblong shape, tapering to the apex. Flesh white, with red veins; very juicy, vinous and of excellent quality; freestone. Not recommended for commercial planting.

Florida Crawford. (Sp.) Large, roundish oblong; suture distinct, but shallow; skin yellow, red cheek; flesh yellow, juicy, melting, of rich, vinous flavor; quality best; free. A good canning Peach. July 15 to 25.

Florida Gem. (Hon.) A Honey seedling of large size; roundish oblong, pointed; highly colored; flesh sweet, rich, juicy, red at the stone; very fine; free. One of the most valuable market varieties of Honey strain. July 1 to 10.

Frances. (N. C.) Large size, with ridge on one side, which terminates in point at blossom end. Color of skin almost entirely red; flesh greenish yellow, slightly red at pit; quality first-class; free. Ripens just after Elberta.

General Harrison. Originated by Mr. C. W. Harrison, Cocoa, Fla. Size medium to large; shape somewhat like Honey seedlings but without long point. Color light yellow, overlaid beautifully with red. A very handsome Peach. Flesh white. Quality good. Cling. Heavy bearer and good grower. July.

General Lee. (N. C.) Very large; skin creamy white, shaded with red; flesh juicy and

highly flavored; quality best; cling. A good market variety. July 5 to 15.

Gibbons' October. (Sp.) A medium to large freestone, in quality unexcelled by any extremely late Peach that ripens this far south. A native seedling. Tree vigorous and handsome. September 25 to October 15.

Greensboro. (Per.) Originated in North Carolina and is being extensively planted in the central South. Of good size, nearly round; skin highly colored, bright red over yellow; flesh white, very juicy, and of fine quality. Semi-cling. A very valuable early market variety. Ripens about June 1.

Hall's Yellow. (P.-to.) Large size, nearly round; yellow washed with red; flesh yellow, red at stone, from which it parts freely. Quality good. Ripens middle to latter part of June.

Honey. (Hon.) Medium size, oval, compressed, with deep suture on one side, extending more than half way round, and terminating in a sharp, peculiar, recurved point; skin whitish yellow, washed and marbled with red in the sun; flesh creamy white, fine, juicy, melting with peculiar honeyed, rich, sweet flavor; quality excellent; free. June 5 to 20.

Imperial. (Hon.) Very large, roundish, oblong; skin greenish yellow, washed with red; flesh white, sweet, juicy, of excellent flavor and good tone; quality best; free. Originated by ourselves. June 25 to July 5.

Japan Dwarf Blood. (O. B.) A blood freestone of good size and appearance and fair quality. Ripens earlier than Alexander. A dwarf-growing stocky tree.

Jessie Kerr. (Per.) A freestone, larger and earlier than Alexander, which it resembles in tree and fruit. Preferred to the latter by many orchardists. Adapted to the same sections as the Alexander.

Jewel. (P.-to.) Medium to large; rounded to oblong; highly colored, red on exposed parts; flesh yellow, red about the pit, juicy, melting, sweet; excellent quality; freestone. Ripens about two weeks earlier than Waldo. A good shipper; tree very vigorous and healthy. This is the most valuable market variety for southern Florida and all tropical and sub-tropical regions. It stands without an equal as the commercial market variety for these sections.

Maggie. (P.-to.) Size medium; roundish oblong; skin yellowish white, washed with carmine; flesh fine-grained, sweet, juicy and melting; sub-cling. Ripens about with the Peen-to. Very much like Bidwell's Early in appearance, time of ripening and other qualities.

GLEN SAINT MARY NURSERIES

Deciduous Fruits

Mamie Ross. (N. C.) A seedling of the Chinese Cling, which it much resembles. Fruit almost as large as the Chinese Cling; white, nearly covered with delicate carmine; flesh white, juicy and of good quality. A regular and prolific bearer. Popular throughout Texas, where it is esteemed the finest early cling. June 15.

Matthews' Beauty. (N. C.) The fruit is of large size, shaped similar to Elberta, but a little longer; skin golden yellow, streaked with red; flesh firm, yellow and of excellent flavor. Ripens two or three weeks later than Elberta.

Mayflower. (Per.) Large; well colored; red all over; of fine quality; cling. A very promising variety. Its earliness, high color and excellent quality are strong points in its favor. Ripens four or five days earlier than Sneed.

Onderdonk. (Sp.) Large; skin and flesh yellow; very juicy and sweet. Free. Originated in Texas. Possesses a valuable combination of quality, appearance and productiveness. A good midseason variety. Last of July.

Pallas. (Hon.) Good size, nearly round; deep red, dotted with salmon and tipped with light yellow at the base and apex; flesh white, fine-grained, melting, with a rich vinous aroma; quality excellent; free. Seedling of Honey. Succeeds well along the Gulf coast from Florida to southern Texas. June 20 to 30.

Peen-to. (P.-to.) A curiously formed Peach, flattened at both ends, with pit of the same

shape; color greenish white, washed with red on exposed parts; flesh light yellow, sweet, rich, juicy, of good flavor, with a slight bitter-almond flavor; cling, with very small pit. Succeeds well in southern Florida. This variety and its seedlings are among the most tropical varieties of Peaches. Ripens in northern Florida May 20 to June 3.

Powers' September. (Sp.) Fruit of medium size and good quality; flesh white, free. The tree is a good grower. A native variety of value on account of its lateness. Sept. 1 to 15.

Red Ceylon. (O. B.) A good-sized fruit of dull green color; flesh blood-red to the stone, from which it separates freely. It is not first-class to eat out of hand, as it is too acid to suit most tastes, but it is a most excellent fruit for cooking, being possessed of a peculiar flavor when cooked, suggesting prunelles. This Peach is as unique in its way as the Peen-to and of an even more semi-tropical character. Tree a heavy and annual bearer in south Florida, and fruits well in Cuba.

Sneed. (N. C.) Very early, averaging eight to ten days earlier than Alexander. Fruit of medium size, somewhat oval in shape; color creamy white, with rich, red blush on sunny side; ripens evenly to the pit; flesh white, very free and juicy; semi-cling. Of fine quality and not subject to rot, as are so many of the early varieties. A seedling of the Chinese cling, it has the vigor of its parents in tree growth and fruit-buds.

Glen Saint Mary Jewel Peaches

GLEN SAINT MARY NURSERIES

Deciduous Fruits

Suber. (P.-to.) Seedling of the Peen-to, originated at Lake Helen in southern Volusia county. It has been quite extensively grown for shipment by the growers of Lake Helen, by whom it is highly esteemed. Its description is not materially different from Bidwell's Early, except that it is larger, firmer and a little more acid than the latter. The tree is a vigorous grower and a satisfactory bearer, and the fruit brings a high price in market.

Taber. (Hon.) Large, roundish, oblong, pointed; skin white, overspread with red; flesh white, streaked with red; firm, very juicy, rich subacid; of fine quality; cling. A seedling of Honey, a heavy bearer. Valuable for canning. June 15 to 25.

Thurber. (N. C.) Large to very large; skin white, with light crimson mottlings; flesh juicy; vinous and of delicate aroma; texture exceedingly fine; free. Resembles Chinese Cling in size and color. Middle of July.

Triana. (Hon.) Medium to large, roundish oblong, slightly pointed; skin white, overspread with red; flesh white, with red markings, rich, juicy, very sweet and of remarkably fine flavor; freestone. We consider this variety, originated and introduced by ourselves several years ago, as one of the very best varieties originated from the Honey. Ripens June 25 to July 5.

New Freestone Peach, Glen

On the back of our 1910 catalogue we gave an illustration in actual natural colors of this valuable new Peach, which originated on the farm of one of our employees near the nurseries. It is a large oval Peach, a Peen-to-Honey cross, measuring $2\frac{1}{4}$ to $2\frac{3}{4}$ inches in length, blunt pointed, yellow, with deep suture, dotted and washed with strong red; in fact, practically red all over; skin tough and easily removed; flesh light yellowish, red about the pit, firm; shipping quality good. Season June to 15. It is one of the largest-fruited varieties adapted to the state, with which we are acquainted, and its high color and good keeping quality make it highly desirable.

1-year, standard size, 4 to 6 feet.....	45	4 00	35 00

Triumph. (Per.) Ripens with Alexander, blooms late. The tree makes a strong growth, bears young, and yields abundantly. The fruit is of large size, with very small pit, skin yellow, nearly covered with red, dark crimson in the sun. Flesh bright yellow, free when fully ripe, and of excellent flavor.

Victor. (N. C. and Sp.) Fruit medium to large, of pleasant subacid flavor; semi-cling. The tree is a vigorous, compact grower, and a heavy annual bearer. The originator claims that it is uniformly ten days earlier than Sneed, which makes it undoubtedly the earliest variety in existence. Texas origin. May 8 to 16.

Victoria. (Sp.) Very large, nearly round; skin yellow; flesh yellow, juicy, sweet and of excellent flavor; free. One of the best varieties of native origin, well worthy of a place in every southern Peach orchard. Valuable for cooking and canning. August 5 to 10.

Waldo. (P.-to.) Size medium, round, oblong, highly colored, light yellow, dark red on exposed parts. Flesh yellowish white, red at the stone, juicy, melting, sweet, of excellent quality, freestone. Ripens with Peen-to. It is a free and regular bearer. Very valuable for Florida, Mexico, gulf sections of Texas and Louisiana, and has given very good satisfaction in the West Indian Islands.

Glen Peaches

PLUMS

In the extreme South, particularly in central and south Florida, southern Texas, and, in fact, all along the Gulf coast, the pure-bred Japanese varieties have not been good bearers, consequently were not generally profitable. But cross-bred varieties—Japanese varieties crossed with native varieties—have proven heavy annual bearers. These cross-bred varieties have made commercial Plum-growing not only possible, but worthy the attention of fruit-growers even in south Florida and northern Mexico. Of these cross-bred Plums we can heartily recommend Excelsior, McRea and Terrell. These are excellent kinds and heavy bearers.

PRICES ON PLUMS.—On Marianna Plum stock.

	Each	Per 10	100
1-year, small size, 2 to 3 feet.....	\$0 18	\$1 50	\$12 00
1-year, medium size, 3 to 4 feet.....	25	2 00	15 00
1-year, standard size, 4 to 6 feet.....	30	2 50	20 00
1-year, extra size, 6 feet up.....	40	3 00	25 00

Abundance. Medium to large; round, with pointed apex; skin greenish yellow ground, overlaid with dull purplish carmine; flesh light greenish yellow, juicy, sweet, with a touch of subacid and slight apricot flavor; pit small; cling; quality best. Strong grower, prolific. This is one of the most popular and profitable early sorts in the Plum-growing sections of the North, and in a wide area of the lower South.

Bartlett. New. We obtained this variety direct from Mr. Burbank. He describes it as follows: "Bartlett is the king for flavor; it out-Bartletts the Bartlett pear in exquisitely perfumed flesh; bears when two years old."

Burbank. The fruit is usually from 5 to 5½ inches in circumference, varying less in size than the other Japanese Plums; it is nearly globular; clear cherry-red, sometimes showing yellow dots or even marbled with a thin lilac bloom; flesh deep yellow, firm and meaty, rich and sugary, with a peculiar and very agreeable flavor; cling. Tree unusually vigorous, with strong, upright shoots and large, rather broad leaves. A popular variety, both North and South.

Chabot. Fruit large, about 2 inches in diameter, oblong-conical; skin pink-red, with many very fine gold dots; flesh yellow, very solid, rather acid; quality very good; cling.

Excelsior. This variety, originated by ourselves in 1887, and first offered to the public in

the winter of 1891-92, is worthy of extended notice. It originated from Kelsey seed, but shows decided evidence of being crossed with some variety of the Chickasaw type. The tree is a remarkably rapid, strong grower and bears annually and abundantly. Fruit medium to large, 1½ inches in diameter, nearly round, no suture; color deep, solid wine-red, with heavy light bluish bloom; stem short, skin firm and without astringency; flesh firm, yellowish, with reddish color near the pit; quality fine; cling-stone. The earliest Plum to ripen in Florida, about June 1. Very handsome; fine shipper.

After many years of experimenting with numerous varieties of Plums, we do not hesitate to say that Excelsior and Terrell are the most satisfactory varieties for planting throughout the length and breadth of Florida, and throughout the Gulf-coast country, westward to the Rio Grande river. While adapted to this extreme range of latitude, we particularly recommend them for the extreme South, as it is to the semi-tropical climates that a lesser number of fine varieties are adapted.

Kelsey. Fruit very large, from 7 to 9 inches in circumference, heart-shaped, long-pointed, usually somewhat lop-sided, with deep, furrow-like suture; skin greenish yellow, sometimes overspread with bright red, with a lovely blue bloom; very showy; flesh light yellow, firm,

Deciduous Fruits

meaty, and of pleasant flavor; quality excellent; free. Bears heavily, coming in young.

Persian Purple-leaved (*Prunus Pissardii*). Fruit medium to large, round; crimson inside and out; quality good, possessing a very decided cherry flavor. June. Tree a good grower; chiefly planted as an ornamental. Retains its vivid foliage purple until late in the season.

Red June (Red Nagate). Fruit medium to large, cordate and very prominently elongated at the apex; suture deep, generally lop-sided; deep vermilion-red all over, with a handsome bloom; very showy; flesh light yellow or whitish; firm and moderately juicy, not stringy, slightly subacid to sweetish; of good, pleasant quality, cling to half-cling; pit small. Tree vigorous, productive.

Satsuma. Fruit medium to large, broadly conical, with a blunt, short point, suture very deep; skin very dark and dull red all over with greenish dots and under-color of brown-red; firm, very juicy; quality good; free. Flesh so firm and solid as to enable it to be kept long in fine condition after being picked. It is grand for preserving, and a grand keeper.

Wickson. Large, deep maroon-red, of the Kelsey type. Long-cordate or oblong-pointed; flesh firm, deep amber-yellow, clinging to the small pit. There is apt to be a hollow space about the pit. Of first quality. An excellent keeper. A cross of Burbank with Kelsey, Burbank furnishing the seed. A good grower and heavy bearer. Valuable in the Plum-growing sections in the North, also good in lower South.

New Hybrid Plum, McRea

We are offering again to our customers, this season, the new hybrid Plum—McRea, which we believe to be well worthy of extensive planting. The tree is vigorous, a heavy annual bearer. The fruit is of medium size, $1\frac{1}{4}$ to $1\frac{1}{2}$ inches in diameter, flattened, oblique at the apex, yellow in color, washed with dull red on the exposed parts, thickly dotted with small, light-colored dots. Bloom delicate and bluish in color. Flesh firm, yellow, becoming juicy; good shipper. Flavor subacid and quality very fine. Said to be a seedling of Kelsey. Ripens June 10 to 15 or later.

The McRea Plum originated near Lake City, Florida, and was first brought to our attention by Mr. J. C. Bates. It is of the same type as Excelsior and Terrell, but quite different in flavor. It is believed to be a seedling of Kelsey, the variety which more than any other has given us splendid seedling plums. The tree is a strong grower, and bears well.

Terrell Plum

This is probably a seedling of Excelsior. The tree is a strong, healthy grower, very similar in character of growth to Excelsior, and also like Excelsior in that it is a heavy annual bearer. The fruit is of large size, $1\frac{1}{2}$ to 2 inches in diameter, nearly round, slightly ribbed at suture, terminating in blunt point. Color at maturity a beautiful reddish yellow, somewhat mottled, covered with purplish bloom; assumes a wine-red when fully ripe. Flesh greenish yellow, meaty, sweet, toned with sufficient acidity to give a fine flavor, juicy; quality excellent; pit very small; cling-stone. We have no hesitancy in recommending the Terrell as one of the finest, if not the finest variety, for all parts of Florida and the Gulf-coast country.

PEARS

Pear-blight, now present in nearly all parts of the country, has proven to be a serious drawback in Pear-growing. As a result, the market prices have greatly advanced, and when a crop of Pears is secured it is a paying crop.

By careful attention to pruning, fertilizing, cultivation and selection of varieties, Pears can be grown successfully. Varieties of the Oriental group are best adapted to the lower South, and these are the only ones we offer to the trade. Such varieties as Le Conte, Smith and Magnolia are little troubled by blight, while Kieffer is practically immune when properly cared for.

PRICES ON PEARS.

1-year, small size, 2 to 3 feet.....	\$0 20	\$1 50	\$13 00
1-year, medium size, 3 to 4 feet.....	25	2 00	17 00
1-year, standard size, 4 to 6 feet.....	30	2 50	20 00

Garber. Fruit resembles the Kieffer in size, appearance and quality, but the tree is more open in growth. Comes in ahead of the Kieffer. A seedling of the Chinese Sand Pear.

Kieffer. Fruit large to very large; color yellow, with bright vermilion cheek, very handsome; flesh very juicy, brittle, a little coarse but of good quality. September and October. The trees should not be allowed to overbear while young, which they are inclined to do; extremely prolific and very valuable. Supposed cross between the Chinese Sand and the Bartlett.

Le Conte. Large to very large, pyriform in shape; skin smooth, pale yellow; when properly handled the quality is good. Early July. The tree is a remarkably vigorous grower, with luxuriant foliage; prolific, and an annual bearer. It adapts itself more readily than any other va-

riety to radically different conditions of soil and climate. In sections of the South where few other Pears are satisfactory, Le Conte has found its home. Supposed cross of the Chinese Sand with a cultivated variety.

Magnolia. Described by its introducers as large to very large, slightly pyriform, basin narrow and shallow. Color solid glossy reddish brown. Flavor sprightly and good, a commingling of sweet and sour, agreeable and refreshing. Matures later and keeps better than Kieffer.

Smith (Smith's Hybrid). Uniformly large and perfect, smooth and handsome; similar in form and color to the Le Conte, melting and juicy, with smooth, creamy texture; quality good when properly ripened. Ripens with or ahead of Le Conte. An early annual and prolific bearer. Tree equals the Le Conte in luxuriant growth.

QUINCES

While the Quince does not succeed all over the whole lower South, yet it does well in many localities and should be planted. It naturally prefers a rather moist, loamy soil. We offer two of the best and most noteworthy varieties.

PRICES ON QUINCES.—On Quince Stock.

	Each	Per 10
2 to 3 feet, small.....	\$0 20	\$1 50
3 to 4 feet, medium.....	25	2 00

Orange. Large; golden yellow, with firm flesh and excellent flavor. A strong grower and thrifty variety.

Pineapple. One of Luther Burbank's introductions. Of large size, smooth and rounded. Fine for jelly and cooks tender.

JAPAN PERSIMMON FRUITS (two-thirds natural size)

JAPAN PERSIMMONS

Since its successful introduction into this country in 1875, the Japan Persimmon (*Diospyros Kaki*) has been slowly but steadily gaining in favor. Since native Persimmon seedlings (*Diospyros Virginiana*) are used as stocks on which to grow the Japan sorts, they can be grown on as wide a range of soil as the native Persimmon, and it is not too much to say that they will succeed with the minimum of care and attention with which any fruit may be successfully grown. At the same time, they respond generously to good care and cultivation. The trees are vigorous, prolific and have few enemies. Some varieties are weakened because of their habit of overbearing, and their crops should be thinned. The region in which the Japan Persimmon may be grown covers the cotton-growing belt.

As the fruit keeps and ships well, it can be placed on the market in good condition, though it requires some experience to know just when the different varieties are in best shipping condition. Wherever known in the markets, it meets with ready sale.

A carefully selected list of varieties will give fruit in abundance from August to December and later. During a very considerable portion of this period other fruit crops are out of season.

Planting and Management

The soil on which the Persimmon orchard is set should be well prepared. Old field land may be used, but, if in poor condition, it should be built up before setting the trees. This can best be done by growing a crop of cowpeas or velvet beans on the land and plowing them under previous to planting.

While Persimmon trees can be set out at any time between November 15 and March 1, in the lower South, preference in planting should be given to the period from December 1 to February 1. They should be given a distance of 18 or 20 feet apart each way, 134 or 108 trees per acre. Great care should be exercised in setting them, and the roots should not be allowed to become dried out. The tops should be cut back to 2 or 2½ feet on the smaller sizes.

Cultivation during the early portion of the season should be frequent and thorough. This may be discontinued about July 1 or 15, and a cover crop of natural weeds or cowpeas or beggar-weed should be allowed to cover the ground. To avoid danger from fire during winter, this should be turned into the soil after it has become dead and dry in autumn. Commercial fertilizers can be used to advantage, and these with the food supplied by the cover crops will keep the trees in a thrifty growing condition.

Persimmons Packed for Shipment

Notes on Varieties of Persimmon

Some of the varieties have dark flesh, others light flesh, still others a mixture of the two. The light and dark flesh differ radically in texture and consistency, as well as appearance, and when found in the same fruit are never blended, but always distinct. The dark flesh is never astringent, the light flesh is astringent until it softens. The dark-fleshed fruit is crisp and meaty, like an apple, and is edible before it matures. Some of the entirely dark-fleshed kinds improve as they soften, like Hayakume and Yeddo-ichi; others are best when still hard, like Zengi and Taber's Nos. 23 and 129. As they are good to eat before they are ripe, it is not so important that the dark-fleshed kinds be allowed to reach a certain stage before being offered to consumers unfamiliar with the fruit. The light-fleshed kinds, and those with mixed light and dark flesh, are very delicious when they reach the custard-like consistency of full ripeness. In some the astringency disappears as the fruit begins to soften, as with Yemon, and in a less degree with Okame and Tane-nashi; in others it persists until the fruit is fully ripe, as with Tsuru. The light-fleshed kinds should not be offered to consumers unacquainted with the fruit until in condition to be eaten. A person who has attempted to eat one of them when green and "puckery" will not be quick to repeat the experiment. The "puckery" substance in the immature Persimmon is tannin. As the fruit ripens, the tannin forms into crystals which do not dissolve in the mouth, and in this way the astringency disappears. Seeds accompany the dark flesh. The light-fleshed kinds are usually seedless. The kinds with mixed flesh have seeds in proportion to the quantity of dark flesh. Hyakume, Zengi and Hachiya are usually overspread at the blossom end with penciling or network of dark lines, and this sometimes occurs in other kinds.

The first Persimmon to ripen is Zengi, in August; the whole crop does not come on at this time, however, but continues to ripen for sixty days. Nos. 23 and 129 come soon after the first fruits of Zengi, ripening their whole crop together. No. 129, although not a large fruit, is a good shipper, and excellent fruit, and perhaps the best early market sort. Following 23 and 129, early in September, come the first Okames, continuing to ripen for a month. Hyakume ripens from September 15 to 30, the bulk of the crop ripening together, which is also true of Yemon, which ripens next.

Some fruits of Triumph ripen in September, and it continues to ripen its fruits until December. At any time after the middle of October, the whole crop of Triumph may be removed and ripened off the trees. Tane-nashi ripens with Yemon and Hachiya with Okame, Yeddo-ichi early in October, Costata later in the month, and Tsuru latest of all, often hanging on the trees until midwinter.

Tane-nashi, Triumph, Okame, Yemon and Yeddo-ichi excel in quality, perhaps in the order named. Okame, on account of its long season, exquisite beauty, and superior quality, is the best for home use and local market. Hachiya is valued for its immense size and showiness. For market, Tane-nashi and Yemon, of the light-fleshed kinds, and Hyakume and Yeddo-ichi, of the dark-fleshed kinds, are good shippers and desirable; Okame is also good. For early market, Taber's No. 129 ranks first, but Taber's No. 23 and Zengi are also desirable. For late market, Costata (this variety is very distinct and handsome in both tree and fruit). For very late market, Tsuru.

VARIETIES DESCRIBED

Costata. Medium size, conical, pointed, somewhat four-sided; diameter $2\frac{1}{8}$ inches longitudinally and $2\frac{3}{8}$ inches transversely; skin salmon-yellow; flesh light yellow, dark flesh and seeds occurring seldom; astringent until ripe, then very fine; one of the latest to ripen; a good keeper. Tree distinct; a rapid, upright grower; foliage luxuriant.

Hachiya. Very large, oblong, conical, with short point; very showy; diameter $3\frac{3}{4}$ inches longitudinally and $3\frac{1}{2}$ inches transversely; skin

dark bright red, with occasional dark spots or blotches and rings at the apex; flesh deep yellow, sometimes having occasional dark streaks, with seed. Astringent until ripe, then very fine. The largest and handsomest of all. Tree vigorous and shapely.

Hyakume. Large to very large, varying from roundish oblong to roundish oblate, but always somewhat flattened at both ends; generally slightly depressed at the point opposite the stem; diameter $2\frac{3}{4}$ inches longitudinally and

Deciduous Fruits

3 $\frac{1}{8}$ inches transversely; skin light buffish yellow, nearly always marked with rings and veins at the apex; flesh dark brown, sweet, crisp and meaty, not astringent; good while still hard. The tree is of good growth and a free bearer.

Okame. Large roundish oblate, with well-defined quarter marks, point not depressed; diameter 2 $\frac{3}{8}$ inches longitudinally and 3 $\frac{1}{8}$ inches transversely; skin orange-yellow, changing to brilliant carmine, with delicate bloom and waxy, translucent appearance; light clear flesh when ripe, with light brown center around the seeds, of which it has several; loses its astringency as soon as it begins to ripen; quality fine. Tree vigorous and a good bearer.

Taber's No. 23. Medium, oblate, flat or depressed point; 1 $\frac{1}{8}$ inches by 2 $\frac{3}{8}$ inches; skin rather dark red, with peculiar stipple marks; flesh dark brown, sweet and free from astringency; seedy; good. Prolific.

Taber's No. 129. Medium roundish, flattened at base; has a small but well-defined point at the apex; diameter about 2 $\frac{3}{8}$ inches both ways; skin

dark yellow-red, with peculiar roughened surface, somewhat resembling alligator leather; flesh light brown, crisp, sweet, free from astringency; excellent; a good keeper and shipper. Vigorous, prolific, regular bearer.

Tane-Nashi. Large to very large, roundish, conical, pointed, very smooth and symmetrical; diameter 3 $\frac{1}{4}$ inches longitudinally and 3 $\frac{3}{8}$ inches transversely; skin light yellow, changing to bright red at full maturity; flesh yellow and seedless; quality very fine; perhaps the most highly esteemed of the light-fleshed kinds. Tree is vigorous and bears well. One of the most desirable market varieties.

Triumph. Medium, tomato-shaped; skin red; flesh yellow; generally has a few seeds; very productive; quality of the best. Ripens from September until December.

Tsuru. Large, slender, pointed; longest in proportion to its size of all; diameter 3 $\frac{3}{8}$ inches longitudinally and 2 $\frac{3}{8}$ inches transversely; skin bright red; flesh orange-yellow, some dark flesh around the very few seeds; astringent until fully ripe, then the quality is good. The latest of all to ripen. Tree vigorous; good bearer.

Yeddo-Ichi. Large, oblate; diameter 2 $\frac{1}{2}$ inches longitudinally and 3 inches transversely; very smooth and regular in outline, with dented appearing surface and slight depression at end opposite the stem; skin darker red than most varieties, with heavy bloom; flesh very dark brown verging toward purplish; sweet, rich, crisp; in quality one of the best. Edible when still hard. Tree very prolific and thrifty.

Yemon. Large, flat, tomato-shaped somewhat four-sided; diameter 2 $\frac{1}{4}$ inches longitudinally and 3 $\frac{1}{4}$ inches transversely; skin light yellow, changing to a dull red, mottled with orange-yellow; distinct in color; flesh deep, dull red, brown around the seeds; of which there are usually a few. Some specimens are entirely light-fleshed and seedless; quality fine. In form some of the fruits have the corrugations converging to the depressed apex, but most do not. Tree vigorous and prolific.

Zengi. The smallest of all; round or roundish oblate; diameter 1 $\frac{3}{4}$ inches longitudinally and 2 $\frac{1}{4}$ inches transversely; skin yellowish red; flesh very dark, quality good; seedy; edible when still hard; one of the earliest to ripen. Vigorous and exceedingly prolific.

Tane-Nashi Persimmon Tree

FIGS

No fruit is more valuable in the southern fruit garden than the Fig. They can be closely planted—10 to 12 feet apart—and yield heavily. The Fig-canning industry is gradually extending throughout the South, and since several tons of fruit can be produced on an acre of ground, it is well adapted to intensive culture. The preserved product put up at the present time in no wise supplies the demand, and we look for a very material increase in the Fig-canning industry.

The fresh Fig is also finding its way into the markets, and meeting with a ready sale. Carefully picked at the right stage of maturity and packed in strawberry crates, they can be placed by express in distant markets, four or five hundred miles, or even more, in good condition.

Figs come into bearing very early and for that reason commend themselves to the fruit-grower. With a proper selection of varieties, fruit may be secured from June to November. No other fruit covers so long a summer-fruiting season.

PRICES ON FIGS.

	Each	Per 10	100
Small size, 1 to 2 feet.....	\$0 15	\$1 30	\$10 00
Medium size, 2 to 3 feet.....	20	1 60	14 00
Standard size, 3 to 4 feet.....	25	2 00	18 00
Extra size, 4 to 5 feet.....	40	3 00	25 00

Blue Genoa. Medium to large size; skin bluish black; quality good. Tree a strong grower and good bearer.

Brunswick. Fruit very large, broadly pear-shaped with short, rather slender stalk; ribs well marked, eye large, open, with rosy scales; skin tough, dark brown in color; pulp thick, soft, quality very good and a satisfactory variety.

Black Ischia. Size medium to large; color of skin bluish black, almost entirely covered with delicate bluish bloom; quality good; strong grower, heavy bearer and quite hardy.

Celeste. Small to medium pear-shaped, ribbed, violet-colored, sometimes shading to purplish brown, covered with bloom about half way up from the neck; stem short, stout. Flesh whitish, shading to rose-colored at center; flesh firm, juicy, sweet, excellent quality. One of the hardiest varieties of Figs, and can be grown far outside of the usual limits of culture; very desirable for canning and preserving.

Green Ischia. Fruit of medium size, long, pulp rosy red, soft, melting, quality rich, sweet;

a variety of very high quality. A strong grower and should be in every Fig collection.

Lemon. Fruit medium to large, flattened, faintly ribbed, color light yellowish green; stem short, stout; flesh white, sweet, rather soft; quality fair to good, ripens during July. Strong grower and very prolific.

Magnolia. Fruit of large size, light colored, handsome; vigorous grower; prolific; excellent for canning; a favorite with Texas planters.

Brown Turkey. Size medium to large; broadly pear-shaped, with short, thick stalk; ribs few in number; color coppery brown; flesh white, or slightly amber-colored, shading to pink about the seeds; flesh solid, excellent quality. This variety ranks with Celeste in hardness. It is very hardy and in every way desirable.

White Adriatic. Size medium to large, flattened, slightly turban-shaped, ribs not well marked; eye open; skin thick; color greenish yellow, or light yellow; flesh rosy red, a good grower and gives excellent satisfaction on rich, strong land.

GLEN SAINT MARY NURSERIES

Deciduous Fruits

New Fig, Leon

This valuable new Fig originated as a seedling from the seed of a Smyrna Fig planted by Mr. J. W. Coles, of Tallahassee, Fla. The parent tree is large, thrifty and bears annually heavy crops of most excellent fruit. It is recommended for planting throughout the Gulf coast Fig region, and, as it has been grown successfully for a considerable time in western Florida, we are confident it will prove desirable.

Fruit large, $2\frac{7}{8}$ x 2 inches, turbinate, largest diameter near the apex; stem short, stout; color yellowish green with light oval dots, brown on parts exposed to sun; scales pink; flesh yellowish white, light amber among the flowers; melting flavor, sweet; quality very good. Leaves large, five-lobed, enlarged upward.

PRICES ON LEON FIGS.

	Each	Per 10
Medium size, 2 to 3 feet.....	\$0 35	\$3 00
Standard size, 3 to 4 feet.....	40	3 50

MULBERRIES

While Mulberries are of little value for commercial purposes or table use, there are nevertheless several purposes for which they are admirably suited and of decided value. They form an economic food for poultry and swine, and for tolling birds away from other fruits there is nothing else so effective.

PRICES ON MULBERRIES.—On Mulberry stock.

	Each	Per 10	100
1-year, small size, 2 to 3 feet.....	\$0 15	\$1 20	\$10 00
1-year, medium size, 3 to 4 feet.....	20	1 50	12 00
1-year, standard size, 4 to 6 feet.....	25	2 00	16 00
1-year, extra size, 6 feet up.....	30	2 50	20 00

Downing. A subacid berry of good quality; strong, upright grower, with a beautiful foliage; valuable variety as a shade tree, as well as for its fruit.

Hicks. Fruit sweet; tree grows rapidly and bears young; productive; should be grown by

every farmer who keeps swine or poultry, this variety being of special value for this purpose; continues in bearing four months of the year.

Stubbs. Large, black; vinous; excellent; very prolific. The fruit which is from $1\frac{1}{2}$ to 2 inches long, is greatly superior to that produced by any other of the cultivated varieties; very acid. Tree vigorous and handsome.

Townsend. A new variety, which, on account of its extreme earliness we have deemed worthy of propagation. Berries of medium size and fair quality. Brought to our attention by one of our employees of that name, on whose place it had been growing for years. Should be planted where birds are apt to ruin other early fruits. March and April.

Multicaulis (*Morus multicaulis*). The Silk-worm Tree. A very vigorous tree, extensively used for purposes of propagation, for shade and for feeding silkworms.

White. A white-fruited form, vigorous and prolific. Should be generally planted.

Leon Fig

Stubbs Mulberry

Deciduous Fruits

GUAVAS

The Guava is a sub-tropical fruit, and quite hardy. Its range of culture is almost the same as the hardy varieties of oranges. The Cattley Guava (*Psidium cattleyanum*) is the hardest species. We offer two varieties of this hardy sort. The bushes are very handsome, with rather thick, bright green, shiny leaves. The fruit measures $\frac{3}{4}$ to 1 inch in diameter or larger. It has a pleasant sub-acid flavor and is very highly esteemed for making jellies and preserves. It is one of the most ornamental of our fruit trees and the plants make handsome lawn specimens.

Red Cattley Guavas

PRICES ON GUAVAS.—From seed.		
	Each	Per 10
1 to 2 feet.....	\$0 35	\$3 00
2 to 3 feet.....	40	3 50
3 to 4 feet.....	50	4 50

Red Cattley. A handsome evergreen shrub, with glossy green leaves, producing large quantities of small, red fruits, 1 to 1 $\frac{1}{4}$ inches in diameter. It can be grown in northern Florida, the Gulf coast country and more tropical regions.

Yellow. Identical with the Red Cattley, except that the fruit is yellow instead of being red-fleshed. Both of these varieties are very desirable.

POMEGRANATES

The Pomegranates are very hardy shrubs which can be grown throughout the Gulf states and the coastal sections of Georgia and the Carolinas. The brilliant scarlet flowers are produced in profusion, and the Pomegranates are generally very prolific, and thrive with little care. The fruit is used in making jellies, marmalades and acid drinks. For this latter purpose they are highly esteemed. The fruit has a fresh crispness, delicacy and sprightliness of flavor found in few fruits. The Pomegranate is one of the coming commercial fruits, and the interest in its culture is gradually increasing.

PRICES ON POMEGRANATES.—On own roots.

1 to 2 feet, 25 cts. each,
\$2 for 10, \$16 per 100.
2 to 3 ft., 30c. each, \$2.50
for 10, \$20 per 100.
3 to 5 ft., 40c. each, \$3.50
per 10, \$30 per 100.

Purple-seeded. Large; rind thin; juice-cells surrounding the seeds (the edible portion of the fruit) dark ruby or wine color; sprightly, vinous and of the best quality.

Rhoda. This variety was brought to our attention by one of our employees, on whose place it has been growing for some years. We have named it in honor of his wife. The fruit is of large size; rind thin but tough; juice-cells large and of beautiful wine-color; crisp, sweet and of exquisite flavor. One of the best varieties.

Rhoda Pomegranates

Loquat fruit

LOQUAT

Eriobotrya Japonica, Japanese Medlar, Biwa of the Japanese

The Loquat is a strikingly handsome, large-leaved evergreen tree adapted to the Gulf-coast country and more tropical locations. The leaves are large, dark green and rough; the young shoots woolly. A compact grower and forms a well-rounded head. It is very desirable as an ornamental.

Nor is it desirable as an ornamental only, for its fruit, which is about the size of a Wild Goose plum, oblong, bright yellow, subacid, has an agreeable flavor and is highly prized for cooking; makes a most excellent jelly.

The white blossoms, borne in spikes, come during the winter months; consequently, while trees are quite hardy all along the Gulf coast, fruit can be counted on only in sections comparatively exempt from severe cold.

PRICES ON LOQUAT.—From seed.

	Each	Per 10	100
1 to 2 feet.....	\$0 30	\$2 50	\$20 00
2 to 3 feet.....	40	3 50	30 00

APPLES

While the Gulf region is not recommended for extensive Apple orchards for commercial purposes, yet in localities, particularly in its upper edge, some varieties are successfully grown. Our list embraces those which succeed best further south.

PRICES ON APPLES.

	Each	Per 10	100
1-year, small size, 2 to 3 feet.....	\$0 15	\$1 20	\$10 00
1-year, medium size, 3 to 4 feet.....	20	1 50	12 00
1-year, standard size, 4 to 6 feet.....	25	2 00	16 00
2-year (Jennings only).....	40	3 50	

Ben Davis. Medium to large; roundish, truncated; conical; yellowish, overspread, striped and splashed with two shades of red; subacid, of fair quality. A late ripener and good keeper. Widely planted; popular.

Early Harvest. Medium to large; yellow, juicy; tender, of fine flavor. A well-known and popular variety. Ripens in June.

Horse. Large, rather oval in shape, ribbed, yellow in color; flesh yellow and subacid. Highly esteemed throughout the southern Apple districts as a summer Apple. Excellent for drying and cooking.

Jennings. The Jennings, or "Jennings' Florida," Apple succeeds farther south than any other variety, and is unquestionably the variety to plant, as it grows well and yields fair

crops of good apples in sections below the range of this fruit. And throughout the Gulf country westward, including coastwise Texas, where Apples are planted, and the selection is limited to one variety, the Jennings will prove most satisfactory. It has been grown in this (Baker) county many years under the name by which we offer it.

Red Astrachan. Large; crimson, with heavy bloom; flesh crisp acid and juicy. Ripens in June. The tree is vigorous and bears very young. Is perhaps adapted to a wider range of climate than any other variety.

Red June. Medium conical; deep red; juicy very productive. A beautiful and thrifty tree. One of the best for the lower South, ripening from June 20 to July 15.

GRAPES

In the southern states, Grapes belonging to two separate groups may be grown. These are the Muscadine Grapes and the northern Bunch Grapes. The wine and raisin Grapes of Europe are worthless except in dry climates.

Grapes of the Muscadine group are native to the South and are well adapted to the soil and climate. When compared with the Bunch Grapes, the fruit clusters are small, but the fruit is fine-flavored and valuable as a table Grape, for making unfermented Grape juice, preserves, jellies and wine. In Virginia and North Carolina they are extensively grown for wine-making.

Muscadine vines are long-lived, reaching a healthy, vigorous old age. They require plenty of space for best results, and should be planted 15 to 25 feet apart each way. The usual plan is to allow them to run on an overhead trellis, 6½ or 7 feet from the ground. The posts should be heart-pine, cypress or cedar. The trellis may be made of wood and wire, or of wood alone.

The usual plan heretofore has been to allow the Muscadine Grapes to grow without pruning, but this is a mistake. It has been shown that, to secure the best results, the vines should be pruned. This is best done in October, immediately after the leaves have fallen. They may also be pruned in summer. Pruning should consist largely in thinning out the vines to admit air and sunlight. Judicious pruning will assist materially in producing more fruit of larger size and better quality.

In the lower South the northern Bunch Grapes, while not so thoroughly at home, can be grown to perfection for home use and for local market, when well cultivated, sprayed, and cared for. The leading varieties are Delaware, Diamond, Ives, Moore's Early and Niagara.

The best trellis for the Bunch Grapes in the lower South is the Munson three-wire trellis. The vines should be planted 8 to 10 feet apart. For the first season or two a post placed at each vine will be sufficient. Later the cross-pieces and three wires can be added, and the vines allowed to run out over them. For best results, the Bunch Grapes must be carefully pruned each winter season. Cut away a goodly portion of last season's growth, leaving four or five buds on each shoot. The best spray for the canes and fruit is Bordeaux Mixture. This should be applied several times each season; beginning soon after the growth starts in spring. It is also good practice to give an application in winter, just after the pruning is done. It is an excellent plan to bag the bunches of fruit, using for this purpose two- or three-pound ordinary paper sacks.

Commercial fertilizer can be used to advantage on all Grapes. Stable manure and wood ashes are also good.

Muscadine

PRICES.	Each	Per 10	100
1-year.....	\$0 15	\$1 20	\$9 00
2-year.....	20	1 60	12 00
3-year—Eden, Flow- ers, James, Mish, Thomas.....	35	2 50	20 00

Eden. A seedling of the Scuppernong, originated in Georgia. Medium-sized black berries, somewhat acid. A good wine Grape; bears early; very productive.

Flowers. Bunches composed of fifteen to twenty large purplish black berries; sweet; vinous. Good quality. Most largely planted varieties of the Muscadine type. Aug. and Sept.

James. Very valuable, the largest of the Muscadine group; berries often measuring ¾ to 1¼ inches in diameter; prolific; black, juicy, sweet. Has taken premiums wherever exhibited. Ripens from August until late in the fall.

Mish. Vine vigorous and prolific. Berries black, medium to large; sweet. August.

GLEN SAINT MARY NURSERIES

Deciduous Fruits

Delaware Grapes

MUSCADINE GRAPES, continued

Scuppernong. Belongs to the Muscadine type. Bunches composed of eight or ten very large berries, bronze-colored when fully ripe; flesh pulpy, sweet, with peculiar agreeable musky flavor; quality excellent. Aug. and Sept.

Thomas. Belongs to the Muscadine type, and one of the best of its class. Bunches seldom exceed eight or ten berries; color reddish purple; pulp sweet, tender. Aug. and Sept.

Bunch Grapes

PRICES ON BUNCH GRAPES.	Each	Perro	100
1-year.....	\$0 15	\$1 20	\$9 00
2-year.....	20	1 60	12 00
3-year—Agawam, Brighton, Champion, Clinton, Dia- mond, Salem.....	35	2 50	20 00

Agawam. A strong-growing variety with large bunches of large, dark reddish brown Grapes. The fruit is of good quality and flavor.

Brighton. Bunches medium; berries large and reddish; skin thin; a desirable table variety.

Champion. Bunches and berries medium, round, blue-black; vine healthy and vigorous. Very early. Too tender for long shipment.

Clinton. Bunches of medium size; berries round, black, pulpy and juicy. Fruit keeps well. A good grower.

Concord. Bunches and berries very large, blue-black, with bloom; flesh sweet, pulpy, tender, good; vine vigorous. Heavy bearer; desirable for home markets. July.

Delaware. Bunches small to medium; berries small, skin red or pink, and very thin; sweet, juicy, vinous; quality best. July.

Diamond. A handsome white Grape equal or superior to Niagara in quality, and ten days earlier. Prolific, very thrifty and vigorous. Well suited for culture in the South.

Ives. Strong grower; very productive; stands shipping well; bunch large; berries large, black, pulpy, sweet, of good quality. A popular wine Grape. Quality much better in the South than in the North. June.

Moore's Early. Similar to Concord in size and shape, but better and earlier.

Niagara. Bunch and berry large; greenish yellow; flesh sweet; quality good. Vigorous and prolific. One of the best for Florida.

Salem (Rodgers' No. 53). Bunch large, compact; berry very large, round, coppery red; flesh tender, juicy, quality best. Ripens with Concord. Vigorous, productive.

Wilder (Rogers' No. 4). Bunch large, compact, shouldered; berry large, round, black; flesh tender, juicy, sweet. Ripens about with Concord. Vine vigorous, hardy, good bearer.

Flowers Grapes (See page 37)

ROSES

Roses are the most important flowering shrubs of the South. Nowhere in the country do they develop in such beauty or bloom in such profusion. No garden is complete without its rose-bed, no planting scheme is perfect which does not provide a place for them.

With few exceptions, the most satisfactory results will be secured by planting Roses grafted on strong-growing roots. Nearly all Roses grown from cuttings are vastly inferior, producing poor, weak plants as compared with grafted specimens. Our Roses are strong, grafted plants, grown in the open field,—the kind of Roses that give satisfaction. In planting, the graft union should be placed two or three inches under the surface of the ground. Any shoots which come from the root below the graft-union should be promptly removed, as these are worthless and will soon injure the grafted Rose above.

CLIMBING ROSES are usually regarded as valuable only for porches or trellises. While useful for these purposes, they are often much more satisfactory as bush Roses. Climbing Roses are strong growers; given plenty of room and severely pruned, they produce an abundance of bloom never surpassed and not often equaled by the true bush Roses. The ability of a Rose to bloom depends on its ability to grow and produce new wood.

Roses are derived from a number of different classes. These classes are indicated by initial letters in parenthesis immediately following the name of the variety. The key to these classes is as follows.

Bk., Banksia; Beng., Bengal; Bour., Bourbon; C. B., Climbing Bengal; C. C., Climbing China; C. N., Climbing Noisette; C. T., Climbing Tea; H. C., Hybrid China; H. N., Hybrid Noisette; H. P., Hybrid Perpetual; H. T., Hybrid Tea; Mult., Multiflora; N., Noisette; Pol., Polyantha; P., Prairie; T., Tea; W., Wichuraiana.

This season we have roughly divided our list according to color, to make selections easier.

PRICES ON ROSES.—Grafted on strong-growing stock.

1-year, strong, open-ground-grown.....	\$0 25	\$2 00	\$17 00
2-year, large, strong, open-ground-grown.....	35	3 00	25 00

Red Roses

Agrippina. (Beng.) Crimson. Profuse bloomer; strong grower; fine for bedding.

Bessie Johnson. (H. P.) Red. Silvery on outside of petals. Flowers medium size. Vigorous.

Climbing Wootton. (H. T.) Very large, rather open flowers, beautifully formed; color bright magenta-red, passing to crimson, richly shaded. A free bloomer, strong grower and a beautiful rose. It gives excellent satisfaction both in growth and flowers. (See illustration on page 41.)

Crimson Rambler. (Poi.) Bright crimson

flowers produced in clusters of 30 to 40, each flower being 1 to 1½ inches in diameter. A very strong-growing climber.

General Jacqueminot. (H. P.) Crimson, well formed and not surpassed in beauty and brilliancy of color. Strong grower and free bloomer for its class.

Giant of Battles. (H. P.) Crimson. Flowers of medium or large size, double and fragrant.

James Sprunt. (C. B.) Deep cherry-red flowers, very full, double and sweet. The cut flowers keep for a remarkably long time in perfect condition. It is a moderate climber, makes a good pillar Rose, and the brilliant and beautiful flowers are to be found at all seasons.

GLEN SAINT MARY NURSERIES

Roses

Louis Philippe. (Beng.) Rich velvety crimson. While not so valuable for bouquets as some varieties, it is the most showy and satisfactory dark red Rose we have for gardens and grounds. It makes a large, vigorous bush, and there is scarcely a time during the entire year when it is not covered with bright red flowers.

Marshall P. Wilder. (H. P.) Flowers very large, perfectly double, and of good substance; color bright cherry-red, shading to crimson. Plant a clean, healthy grower.

Mrs. Cleveland. (H. P.) Dark red or crimson; velvety; well formed; medium to large; fragrant.

Papa Gontier. (T.) Outer petals red, inner ones pink. A free-flowering Rose of great merit, with beautifully formed buds and flowers. Very vigorous and one of the best Roses in our collection.

President Lincoln. (H. P.) Crimson, dark and velvety. Strong grower with good foliage, and medium to large flowers.

Papa Gontier

Prince Albert. (H. P.) Beautifully bright crimson; very large, full and fine.

Reine Marie Henriette. (C. T.) Cherry-red, a pure shade, which does not fade or shade off into undesirable tints; large, double and beautifully formed; somewhat fragrant. This is one of the finest red climbing Roses in our collection and we strongly recommend it. (See illustration, page 42.)

Virginia R. Coxe (*Gruss an Teplitz*). (H. T.) A bright, dazzling, crimson, with beautiful buds and medium-double flowers of large size. A profuse bloomer throughout the whole season. A strong and vigorous grower and should be given plenty of space.

Pink Roses

Anne de Diesbach. (H. P.) A bright clear pink, with large petals, delicately veined. Flowers large and very double. It is a vigorous grower and produces its beautiful flowers in abundance. Sweet scented. A fine variety.

Antoine Mouton. (H. P.) A vigorous grower, bearing flowers of extraordinary size. Bright, clear pink, reverse of petals silvery rose.

Apolline. (Bour.) Light pink, shaded darker on edges; vigorous; free bloomer, flowering in clusters.

Baby Rambler. (Pol.) A dwarf Rose, reaching a height of 18 to 20 inches; flowers pink, double, produced in dense clusters of two to three dozen. It is always in flower, even in the hot weather of midsummer, and makes a beautiful mass of bloom. A very desirable Rose.

Bon Silene. (T.) Deep salmon-rose, marked with carmine; highly scented. Valuable for its buds, which are large and of fine form and color. Very strong and robust in this section; bears profusely the year round. An old favorite.

Bougere. (T.) Light pink, outer surface of petals darker, buds of medium length; free bloomer; strong grower.

Bridesmaid. (T.) A very large, finely formed Rose; fine clear pink. A splendid variety, and appropriately named, for it is an excellent companion for that grand Rose, the Bride.

Catherine Mermet. (T.) Pink, with the inner surface of the petals lighter colored; good bloomer; well formed buds; medium vigorous. A good variety.

Roses

Heinrich Schultheis. (H. P.) Clear pink; full; double; of good size; vigorous grower.

Henry M. Stanley. (T.) Pale pink, edged and mottled deep rose, with a lovely shade of salmon on reverse of petals. Large, double and full.

Her Majesty. (H. P.) Beautiful shade of pink; large, well-formed flowers; sweet scented; very double. A vigorous grower, producing flowers on long stems.

Improved Rainbow. (T.) Pink, petals striped with deeper pink, beautifully marked; full globular buds. An odd and very desirable variety. Sport from Papa Gontier.

Jules Finger. (T.) Dark pink, almost red; good buds; flowers good size; very double.

La Grandeur. (T.) Light pink with dark pink veins; inner petals twisted smaller and shorter than outer ones. Flowers in clusters of 5 to 15. Good grower.

La Reine. (H. P.) Dark pink, petals lighter on the outer surface; large-flowered; double and fragrant. Quite vigorous.

Louis Richard. (T.) Pink with salmon shading, petals darker on the outer surface; well-formed buds on long stems. Good grower and bloomer.

Climbing Wootton Roses

Cheshunt Hybrid. (H. T.). Large; double; full; of perfect form; fragrant; ruby-crimson, passing to rich maroon; a strong grower.

Climbing Bridesmaid (C. T.) Somewhat similar to its parent, Bridesmaid; dark pink, variable in color. Strong climber.

Comtesse Eva Starhemberg. (T.) Yellow, buff and yellow center, edged rose. Medium to large; double and full. Strong grower.

Coquette Bordelais. (H. P.) Pink; large regular flowers; vigorous grower.

Duchesse de Brabant. (T.) Pink; petals deeper colored on outer surface; buds and flowers globular; very free bloomer; vigorous and excellent for planting in beds, as the bushes when in bloom are very showy. An old-fashioned garden Rose of great merit.

Duchesse de Brabant Rose

Roses

Mad. De Vatry. (T.) Pink, outer petals and outer surfaces red or deep pink; vigorous; good bloomer, with large, handsome foliage.

Mad. Gabriel Luizet. (H. P.) Pure light pink; regularly formed; large flowers. A good bloomer.

Mad. Joseph Schwartz. (T.) Large, globular flowers, very full and sweet; color pure white, the edges of petals tinged with carmine. The flowers have the exquisiteness and delicacy of its parent Duchesse de Brabant. One of the most satisfactory here.

Mad. Lambard. (T.) Pink, darker on outer petals, outer surfaces of petals shaded deeper pink; very vigorous; good bloomer. A satisfactory and desirable variety. We recommend it highly. (See page 43.)

Mad. Scipion Cochet. (T.) Pink, edges of petals darker; flowers globular; free blooming; strong grower with handsome bright foliage. Very satisfactory.

Magna Charta. (H. C.) Bright clear pink; very full and double; very vigorous, making a large bush.

Maman Cochet. (T.) Pink with well-formed, long, pointed buds. The open flowers are double and of good size. Very hardy and vigorous.

Mrs. George Paul. (Bour.) Light pink; good; regular; double flowers. Vigorous; distinct.

Paul Neyron. (H. P.) Strong and vigorous; pink; full; double. The largest-flowered Rose grown, often measuring 6 inches across. A very desirable variety, and one of the best Hybrid Perpetuals for the South.

Santa Rosa. (T.) Pink, with dark pink buds; dwarf; vigorous; very free blooming; medium-sized flowers. An excellent Rose; excellent for bedding.

Souvenir de Leonie Viennat. (T.) Large, elegantly formed flowers, double and full. Color deep yellow, with amber in base, passing to rose color, reverse of petals silvery rose.

Souvenir de Madame Pernet. (T.) Light pink, edges of petals deep pink; full, globular buds; good grower and bloomer. Same character as Duchesse de Brabant, but darker in color.

Vick's Caprice. (H. P.) Pink, fairly dark, petals often striped with lighter color.

York and Lancaster. (H. P.) Pink or white. One of the oldest Roses in existence, dating back to the time of the Wars of the Roses. Very thrifty grower.

White Roses

Blanche de Muer. (H. P.) White, tinted with pink; small or medium flowers; double. Vigorous.

Bride. (T.) White, slightly pink tinted on outer petals; buds long, pointed, outer petals spreading; a very free-blooming variety and a great favorite.

Climbing Clothilde Soupert. (C. T.) White; globular buds, pink tinted in the center; flowers in clusters of three to eight; free blooming; a strong growing climber.

Climbing Marie Guillot. (C. T.) White. Very double; strong grower; flowers in clusters of two to five; foliage large and bright; a desirable variety.

Reine Marie Henriette (see page 40)

Roses

Madame Lambard Roses (see page 42)

Clothilde Soupert. (Pol.) White, tinted pink in the center and at the base of the small, closely set petals. Flowers flat, rounded, of medium size, produced in large clusters; very sweet-scented. Bush a vigorous grower and a free bloomer. This is a very desirable variety and a favorite with all who know it.

Coquette des Alpes. (H. N.) White, tinted pink or very light pink; flowers medium size; vigorous grower.

Coquette des Blanches. (H. N.) White or slightly pink tinted; globular buds; flowers small to medium.

Devoniensis. (C. T.) White, tinted with pink; with beautiful buds. This is one of the most desirable climbing sorts and is not surpassed by any other variety in vigor of growth. It blooms profusely and flowers are always to be found.

Estelle Pradel. (C. N.) Lovely, pure white buds; flowers medium size, full and sweet; profuse bloomer. A favorite climbing Rose in the South.

Elise Boelle. (H. N.) White, delicately tinged with pink; medium size; full, beautiful, circular form; very sweet. A lovely Rose.

Frau Karl Druschki. (H. P.) White, with blooms four to six inches across; buds full, well-formed; open flowers very double. A strong vigorous grower; nearly always in bloom. We strongly recommend this variety.

Kaiserin Augusta Victoria. (H. T.) White with lemon center; full pointed buds; vigorous and a good bloomer; very double. This Rose is one of the newer sorts, with handsome bright foliage. The flowers are borne on long, straight stems. A variety of great merit.

Madam Alfred Carriere. (H. N.) White, pink tinted; flowers rather loose; medium size. A strong grower and free bloomer. It grows well with us.

Marie Guillot. (T.) White, tinted with yellow and light pink. A vigorous Rose with large, full, double flowers.

Devoniensis Roses

Roses

Marie Lambert. (T.) White; beautifully formed buds; sweet-scented; vigorous. A free bloomer and one of the best for early spring flowers.

Marie Van Houtte. (T.) White, with lemon tint, pink on outer petals; buds of good size; flowers turning pink as they fade; good bloomer; thrifty grower; leaves large and shining. A very handsome and desirable Rose.

Mrs. Robert Peary. (H. T.) This Rose is

three to fifteen; one of our best white Roses. Very free-flowering and vigorous.

Sylphide. (T.) White, slight pink tint; inner petals irregular; flowers medium size; free bloomer; strong grower. A good garden variety.

White Maman Cochet. (T.) Pure white, or white with very slight, delicate, pink tint on the outer petals; full, double, beautiful pointed buds with regular shell-like petals. A profuse bloomer and strong, vigorous grower. We can strongly recommend it as one of our best Roses.

White Perle des Jardins. (T.) White, lemon-tinted in center; open flowers have petals turned back along edges, giving them a pointed appearance. Strong grower and one of the most distinct and desirable white Roses.

Yellow and Salmon Roses

American Banner. (T.) Salmon-pink, petals pink tinted on outer edges; of good size; buds pointed; strong grower and good bloomer.

Chromatella. (C. N.) Lemon-yellow; long-pointed buds; very vigorous and free-blooming. An old and desirable sort.

Etoile de Lyon. (T.) Yellow; large full flowers; deep yellow with good buds and large double flowers. It blooms profusely and is a strong grower. Desirable yellow bush rose.

Fortune's Double Yellow. (C. T.) In color this Rose is a striking blending of yellow, salmon and bronze of beautiful shades; a strong, vigorous grower, producing its half-double flowers in spring in great profusion.

Gloire Lyonnaise. (H. P.) Light salmon-yellow, sometimes creamy white. A large-flowered variety and very desirable. A fine Rose.

Isabella Sprunt. (T.) Lemon-yellow; buds like Safrano; fine bloomer; a very desirable variety; a strong grower. Originated in eastern North Carolina.

Letty Coles. (T.) Beautiful blush-colored flowers, sometimes tinged with pale yellow; medium to large size and fine form; a strong, vigorous grower; sweet Tea fragrance.

Marechal Niel. (C. N.) Deep yellow; very large; full globular form; delightfully fragrant. The finest of all yellow climbing Roses. In the South it is at home and grows at its best. A

Frau Karl Druschki Roses (See page 43)

identical with Kaiserin Augusta Victoria, except that it is a climber. A strong grower and a very desirable and satisfactory variety.

Perfection des Blanches. (H. N.) White, very slightly tinted, medium-sized flowers; regular and very double.

Pearl Rivers. (T.) White, outer petals tinted pink; fine buds and good double flowers. A vigorous Rose.

Queen. (T.) Pure white with globular buds, and good double flowers produced in clusters of

Roses

strong, vigorous grower, producing freely its flowers at all seasons in great abundance. It should have the first place in every collection.

Media. (T.) Yellow; large, full buds; deep yellow in center, lighter on the outer surfaces; free bloomer; strong grower. An excellent yellow bush Rose, equal to Etoile de Lyon and closely resembling it.

Safrano. (T.) A delicate and beautiful tint of salmon, which is always bright and clear, and does not fade or shade off into dull and undesirable tints. One of the most exquisitely colored of Roses, and exceedingly beautiful in the bud. In this latitude it makes a vigor-

Safrano Rose

White Maman Cochet Rose (see page 44)

ous, strong bush, and bears an abundance of flowers at all seasons. One of the best Roses for the South. Should be cut before the flowers are expanded.

Solfaterre. (C. T.) Clear sulphur-yellow; large and double. Foliage and character of growth very similar to Marechal Niel. A splendid climber and profuse and constant bloomer; the flowers do not blight, wilt or fade in the hot midsummer sun, like many of the other fine varieties. With proper pruning, it makes a splendid bush Rose. See illustration at head of Rose section.

FLORIDA STATE HORTICULTURAL SOCIETY'S REPORTS

At the annual meeting of the Florida State Horticultural Society, numerous papers and reports containing the most advanced thought of up-to-date, practical horticulturists are presented. The discussions following these reports bring out many valuable points. These papers, reports and discussions are reported verbatim and published in book form. These books are mailed to members of the society. Any one may become a member by paying \$1 membership fee.

The 1911 Report will be mailed to any one remitting \$1 for it.

Shade Trees

Nowhere in the country is shade so acceptable or so necessary as in the South. Whether in park or city street, country road or lawn, shade trees are valued not as luxuries, but as necessities for health and comfort. Nothing adds more to the home grounds, nothing so improves the appearance of town or city, as well-placed, healthy, vigorous shade trees.

The list of trees which is offered to our customers we can strongly recommend for planting throughout the southern states. They are well grown, with straight stems and well-developed root systems. Grown in nursery rows for a number of years, they are vastly superior to the trees which may be obtained from the woods.

Camphor Tree

CAMPHOR (*Cinnamomum Camphora*). An evergreen tree, of handsome, compact growth, with bright, clean foliage. A strong grower on moist, well-drained lands; hardy throughout Florida and the greater portion of the Gulf states. Strongly recommended for windbreaks. Now being planted in Florida on a commercial scale for the production of camphor gum.

American (*Ulmus Americana*). A very desirable variety, with long, gracefully curved branches. Leaves green, light beneath, becoming yellow in fall.

Cork (*Ulmus racemosa*). One of the Elms best adapted to the South, reaching a height of upwards of 100 feet, with oblong rounded top. Branches provided with corky wings, and clothed with dark green leaves. A valuable shade tree.

DOGWOOD, White. (*Cornus Florida*). A small tree, with spreading bushy top and bright green leaves. The flowers with their large, white bracts, appearing in spring before the leaves, make the Dogwood one of the most striking ornamental trees. The fruit ripens in autumn and is bright scarlet in color.

	Each	Per 10

Scarlet (*Acer rubrum*). One of our handsomest Maples, growing to large size with moderately spreading branches. The leaves are three- to five-pointed, light green above, white beneath, changing to vivid shades of scarlet and gold in autumn. In early spring the bright red flowers are produced, followed by the equally highly colored seeds.

Silver (*Acer dasycarpum*). A maple of rapid growth, with large, five-pointed leaves, green on the upper side and white, silvery colored beneath, turning pure yellow in fall. Branches wide-spreading and rather drooping.

Wier's Cut-leaved. A form of silver Maple, with deeply divided leaves. A rapid-growing tree with drooping branches. We recommend it highly.

Laurel (*Quercus laurifolia*). A medium-or-large-sized tree, with thick, rounded head and slender branches. The leaves are oblong, sometimes lobed, dark green and shining. A handsome shade and avenue tree, native from Florida to Louisiana and Virginia.

Pin (*Quercus palustris*). One of the most beautiful Oaks, with symmetrical conical head and short, spreading branches. The leaves are bright green, becoming red in fall, five- to seven-lobed. In moist soil it grows rapidly and has proved to be well adapted throughout the northern part of Florida and northward.

Scarlet (*Quercus coccinea*). A medium-sized Oak, with rounded open head. The leaves are very large, usually with seven wide, deep lobes. They turn bright scarlet in autumn. It grows well on rather dry soil.

Water (*Quercus aquatica*). The true Water Oak of the South, with slender spreading branches and rounded, rather conical head. The leaves are somewhat broader, and slightly three-lobed at the apex. A rapid grower and one of our most beautiful shade trees.

Willow (*Quercus phellos*). A rapid-growing symmetrical tree, with rounded head and narrow willow-like leaves. One of the most satisfactory Oaks.

GLEN SAINT MARY NURSERIES

Shade Trees

PECAN (*Hicoria pecan*). A majestic tree, rivaling the New England elm in stateliness and grandeur. Grows well throughout the cotton states and even farther north and west. Valuable for its nuts, and should be commonly planted, both for fruit and shade. See page 17 for prices.

PLUM, Flowering. A small tree with rounded, spreading top; flowers appearing before the leaves, pink, double; very handsome and showy; leaves wine-colored.

Tulip Tree

ARBORVITAE AND OTHER CONIFERS

These plants make beautiful individual lawn specimens. The different colors—yellow, green, dark green and blue-green—give a striking effect when planted in masses, either when groups are made up of a single kind or of a number of different kinds. They make an excellent background for other shrubs. For hedges they are unsurpassed. In planting for a hedge, they should be given more distance than other hedge plants. Four or five feet apart is not too much.

As plants for porches or porch steps, they are very satisfactory. They are hardy and long-lived. We have tested the list offered for many years and know they will give satisfaction.

ARBORVITÆ (Thuya, Biota). Beautiful evergreen shrubs of compact, symmetrical growth; especially suited for formal plantings. The varieties we list are adapted to southern climatic and soil conditions.

Aurea nana. A variety with compact rounded head and handsome greenish golden foliage.

	Each	Per 10
1 to 1½ feet.....	\$0 40	\$3 50
1½ to 2 feet.....	50	4 50
2 to 3 feet.....	75	6 00
3 to 4 feet.....	1 00	9 00

Compacta. A variety of compact growth. Head somewhat conical, foliage very dark green; very vigorous and one of the most satisfactory varieties.

	Each	Per 10
2 to 3 feet.....	\$0 45	\$4 00
3 to 4 feet.....	85	7 00

Pyramidalis. Upright and narrow, growing to a good height, with beautiful, light green foliage. One of the most striking Arborvitæ, a rapid grower; very fine for formal plantings.

	Each	Per 10
1 to 2 feet.....	\$0 35	\$3 00
2 to 3 feet.....	45	4 00
3 to 4 feet.....	85	7 00

Rosedale. Of compact rounded, symmetrical form with very dense head. The foliage is dark, bluish green and very handsome. Very desirable for the South.

	Each	Per 10
1 to 2 feet.....	\$0 35	\$3 00
2 to 3 feet.....	45	4 00
3 to 4 feet.....	80	7 00
4 to 5 feet.....	1 50	12 00
Special size.....	2 50	

CEDRUS Deodara (Indian Cedar). A cone-bearing tree introduced from the Himalayan mountains. Of pyramidal form, reaching immense proportions. Foliage a beautiful shade of bluish green. When the new foliage is opening in spring, the trees are particularly handsome. This tree is well adapted to the southern states and makes an exceedingly handsome lawn specimen. It takes the place of the Colorado Blue Spruce in southern plantings. It is more open in habit but similar in coloring. For illustration see right hand of heading above.

	Each	Per 10
1 to 2 feet.....	\$0 50	\$4 00
2 to 3 feet.....	75	6 00
3 to 4 feet.....	1 00	9 00
4 to 5 feet.....	1 50	12 50
Special size.....	2 00	

CREEPING JUNIPER (*Juniperus Sabina cupressifolia*). A juniper of trailing or creeping habit, bluish green, very handsome. Excellent for bordering walks and for cemetery planting.

	Each	Per 10
1-year.....	\$0 40	\$3 50
2-year.....	50	4 50

JUNIPERUS Virginiana (Red Cedar). A dark green tree, with conical head and upright spreading branches. It grows rapidly and reaches a large size. It should be planted in a sunny exposure, but succeeds on a wide range of soils. It is a very satisfactory evergreen.

	Each	Per 10
5 to 7 feet.....	\$1 00	\$9 00
Special size.....	3 00	

SHRUBS AND HEDGE PLANTS

Nothing adds so much to the beauty of the home surroundings, nothing gives so much pleasure, as a good lawn and well-placed shrubs and vines. The number which may be planted will be governed by the shape and extent of the grounds, but even the smallest lot has a place for a few. They should be planted in masses, in corners and about the buildings, always leaving a goodly proportion of open lawn. Aside from their value in beautifying the grounds, they actually increase the money value of a property. A city lot, for instance, with well-grown shade trees and shrubs, is decidedly more valuable than a piece of bare ground.

The varieties offered are those which have been thoroughly tested and which we know will give satisfaction. Our stock is healthy, vigorous and well grown.

ABELIA grandiflora. A beautiful evergreen shrub with dark green glossy leaves becoming bronze-colored in winter. Flowers white, funnel-shaped, tinged with pink, delicately sweet-scented, borne in clusters from early spring until late autumn. One of our handsomest shrubs.

	Each	Per 10
1-year plants.....	\$0 30	\$2 50
2-year plants.....	40	3 50

ALTHAEA (*Hibiscus Syriacus*). Rose of Sharon. This is one of our most desirable flowering shrubs. The top is rather upright and spreading. They are easily grown and produce an abundance of bloom throughout a long period.

	Each	Per 10
1 to 2 feet.....	\$0 20	\$1 50
2 to 3 feet.....	25	2 00
3 to 4 feet.....	40	3 50
4 to 6 feet.....	50	4 50

Carnea plena. Double white, with red throat; a free bloomer.

Rubra. Double red, large, free-flowering and a very handsome shrub when in full bloom. One of the best sorts. It makes an excellent hedge, and the two colors may be mixed.

CAMELLIA (*Camellia Japonica*). Handsome evergreen shrubs with bright shiny green leaves. Free-flowering and very desirable. No southern garden should be without this grand flower. We offer three double varieties, red, variegated and white.

Prices of Camellia.	Each	Per 10
12 to 15 inches.....	\$0 60	\$5 00
15 to 18 inches.....	80	7 00

CHERRY LAUREL (*Prunus Caroliniana*).

This small tree makes a handsome, durable hedge, the bright glossy evergreen foliage giving it an exceedingly pleasing appearance. Plants should be set about 15 inches apart, and may be trimmed in rectangular or rounded form.

	Each	Per 10	100
1 to 2 feet.....	\$0 20	\$1 50	\$12 00
2 to 3 feet.....	25	2 00	18 00

GRAPE MYRTLE (*Lagerstræmia Indica*). Vigorous deciduous shrubs, reaching a height of 15 to 20 feet; leaves small, bright green. The fringed flowers are produced in immense clusters in different shades of white, purple and scarlet; of easy culture and one of the most conspicuous southern shrubs.

	Each	Per 10	100
2 to 3 feet.....	\$0 25	\$2 00	\$17 00
3 to 5 feet.....	40	3 00	25 00

2-year.....	35	3 00
3-year.....	50	4 00

Spiræa Cantoniensis. A compact branching shrub, 3 to 4 feet in height, producing a dense mass of pure white flowers, very handsome and desirable.

Van Houttei. Branches long and arching; leaves dark green; flowers produced in clusters along the branches; hardy. A splendid plant for mass effects, and blooms early in the spring season.

SWEET SHRUB (*Butneria florida*). A deciduous shrub, highly esteemed for its large, reddish, sweet-scented flowers, which are produced in early spring. The leaves are large, dark green, and the plant reaches a height of about five feet. Grows well in shade.

	Each	Per 10
2 to 3 feet.....	\$0 30	\$2 50
3 to 4 feet.....	40	3 00

TRIFOLIATA ORANGE (*Citrus trifoliata*). A small-growing, hardy variety of Orange, with sweet-scented flowers appearing in spring before the leaves. Of dense, upright form and very thorny. Fruit round, golden, ripening in autumn and remaining on the trees for two or three months after coloring. A handsome tree, and makes an impenetrable hedge. Very valuable and hardy, withstanding temperatures below zero. (See prices, page 4.) It is largely used as a stock for hardy citrus fruits.

WHITE FRINGE (*Chionanthus Virginica*). A large shrub or small tree, with dark green leaves. Flowers white, in loosely branched clusters. Native throughout the South and easily grown.

	Each	Per 10
1 to 2 feet.....	\$0 35	\$3 00
2 to 3 feet.....	40	3 50

Spiræa Cantoniensis

BAMBOOS, GRASSES, ETC.

Among ornamental plants, none are more important than the Bamboos and taller-growing grasses. The long, willowy canes and fine foliage give a delicate, pleasing effect, not secured by any other kind of ornamental plant. Under suitable climatic conditions they will grow on very poor soil, particularly if well supplied with plant-food and water. Either commercial fertilizer or stable manure may be used to good advantage.

The large-growing varieties of Bamboos make excellent windbreaks, and are also valuable for tall hedges and as screens for unsightly buildings or other objects.

Those listed below have been carefully tested for hardiness and general beauty. They will withstand temperatures of twelve to fifteen degrees above zero without injury. We are certain they will give satisfaction and, they should be more generally used throughout the South. Nothing else takes their place and, where tropical effects are desired, bamboos are among the most satisfactory plants to use. They may be planted either in single clumps or in masses, but must be allowed a goodly amount of space.

Prices on *Arundo donax*, *Arundinaria falcata*, *Bambusa argentea*, *argentea striata*, *aurea*, *Metake*, *verticillata*.

	Each	Per 10
Small clumps.....	\$0 35	\$3 00
Strong clumps.....	50	4 00
Extra-strong clumps....	\$1 to 2 00	

ARUNDO donax variegata. A strong-growing grass. Stems 8 to 12 feet high. Leaves large, green with stripes of creamy white. Plumes large and showy. Very hardy.

ARUNDINARIA falcata. A very graceful Bamboo, reaching a height of 10 to 12 feet. Grows in dense thick clumps; leaves fern-like. Very hardy.

BAMBUSA argentea. This very desirable variety reaches a height of 30 to 40 feet, with graceful spreading top. Very hardy.

argentea striata. This variety is the same as *Argentea*, except that the leaves are beautifully striped green and white. A strong grower. Hardy.

Aurea. Stems yellow, reaching a height of 10 to 12 feet. Rootstocks spreading underground. The branches are open spreading. Hardy.

Bambusa Metake. A handsome broad-leaved Bamboo, reaching a height of 10 feet. Grows in large, dense masses. Ornamental. Hardy.

Verticillata. Canes striped yellow, reaching 15 or 20 feet. Makes fine clumps and very hardy.

PAPER PLANT (*Aralia papyrifera*). A very ornamental plant with large leaves shaped something like the castor bean. Splendid for clumps and borders. Strong plants. 25 cts. each, \$2 per 10.

YUCCA filamentosa (Adam's needle, or Bear Grass). A native plant with long, green leaves borne in a dense clump. Flowering stems 4 to 6 feet high bearing in profusion drooping creamy white flowers. Very hardy and desirable.

	Each	Per 10
1-year.....	\$0 30	\$2 50
2-year.....	40	3 50

CABBAGE PALMETTO (*Sabal Palmetto*). The large, tall-growing native palm of Florida and the Gulf states. Hardy on the Atlantic coast as far north as Cape Hatteras. A thrifty, vigorous grower and very desirable. Three-year-old plants, 50 cts. each, \$4 for 10, \$30 per 100.

VINES

To add to the beauty of the home and its surroundings, vines of different kinds are unsurpassed. If many bare, unsightly walls were covered by them, they would become things of beauty, for vines have the power to soften lines and cover up imperfections. Where it is desired to give an appearance of age to a building they are unequalled.

Nothing can surpass the glory of the Wistaria and the Yellow Jessamine when in full bloom. The Japan Ivy and Virginia Creeper are well adapted for brick walls, or surfaces where a vine is required to climb by fastening itself. The Honeysuckles and Trumpet Vine are splendid for covering mounds, dead trees and fences. The Yellow Jessamine and the two Honeysuckles are evergreen, and where an evergreen covering is desired they should be given preference. It should be borne in mind that the climbing roses are useful for these same purposes, and they are always desirable for locations having good sunlight.

For best results the land should be well prepared, and if planted near brick walls the mortar and brick-bats should be removed. Dig deeply and mix a fair amount of commercial fertilizer with the soil about two weeks before planting. After they are established, commercial fertilizer or stable manure may be used as a surface dressing. With good drainage, vines should be given plenty of water for best results.

HONEYSUCKLES (*Lonicera*). Rapid-growing vines, with handsome flowers. They make a dense covering and are especially adapted for porches, trellises and for hiding unsightly places.

	Each	Per 10
1-year.....	\$0 25	\$2 00
2-year.....	35	3 00

Trumpet (*Lonicera sempervirens*). A beautiful, strong-growing vine, with oval leaves, bluish green in color. Flowers showy, scarlet on the outside, yellow within, large and produced nearly the whole year with us. Even in winter it continues in bloom.

White (*Lonicera Japonica*). A rapid-growing vine, with slender stems, and dark green leaves. Flowers white, changing to yellow as they fade. Produces a dense covering.

JAPAN IVY (*Ampelopsis Veitchii*). A beautiful rapid-growing vine, with three-lobed or three-parted dark glossy green leaves. A very beautiful vine, especially adapted for covering brick and stone walls. One-year well-grown vines, 25 cts. each, \$2 for 10.

TRUMPET VINE (*Bignonia radicans*). A strong-growing vine, with dark green compound leaves. The flowers, brilliant orange

Trumpet Vine, continued

in color, are borne in clusters during the summer months. The Trumpet Vine is valuable as a quick-growing cover for trellises, fences or any unsightly object. 2 to 3 feet, 30 cts. each, \$2.50 for 10.

VIRGINIA CREEPER (*Ampelopsis quinquefolia*). A hardy, rapid-growing vine; leaves deciduous dark green, five-parted, gorgeously colored red and scarlet in fall. A splendid vine for walls, arbors and porches.

	Each	Per 10
1-year plants.....	\$0 25	\$2 00
2-year plants.....	30	2 50

WISTARIA (*Wistaria Chinensis*). A magnificent strong-growing vine, hardy throughout the country. The flowers, which appear before the leaves in spring, are produced in large, pointed clusters.

	Each	Per 10
2 to 3 feet.....	\$0 25	\$2 00
3 to 4 feet.....	40	3 00
4 to 6 feet.....	60	5 00

YELLOW JESSAMINE (*Gelsemium sempervirens*). A slender, rapid-growing evergreen vine. Flowers yellow, fragrant, produced in profusion during the spring months. One-year vines, 20 cts. each, \$1.50 per 10.

Terms of Business

Location. Our Nurseries are one and one-half miles southwest of Glen Saint Mary, Baker county, Florida, a station on the Seaboard Air Line Railway, thirty miles west of Jacksonville.

Long Distance Telephone and Western Union Telegraph office in our office.

Glen Saint Mary is our freight, express and telegraph station.

Invitations to Visitors. We take pleasure in showing our stock to persons wishing to purchase; and, if notified in time, will meet visitors at the station on arrival.

No Agents.—We employ no agents, and have no connection with any other nursery. Trees sold to dealers must be resold by them upon their own responsibility. We are responsible only to parties purchasing direct from our Nurseries.

Club Orders.—Neighbors can sometimes club together and have one of their number place orders for all, thus often securing lower prices on account of large number of trees ordered.

Minimum Orders.—We do not care to accept orders amounting to less than \$2.

Applying Prices.—Five, fifty and five hundred trees of one class, at ten, hundred and thousand rates, respectively, purchaser's selection from varieties of one fruit having a common price. For instance, fifty or more peaches, in one or more varieties, would come at the hundred rate, and five hundred or more at the thousand rate. The foregoing does not apply to badly assorted orders, or to long lists made up of a few each of many varieties.

Terms Cash with order, if for immediate shipment. Orders for trees to be held for some weeks after the shipping season opens should also be accompanied by full payment. On orders booked in advance of the shipping season 25 per cent down, with the balance due when the shipping season opens. We do not care to ship trees C. O. D.

Remittances.—To secure safety and prompt acceptance, remittances should be made by Bank Draft, Express or Post Office Money Order, Registered Letter or Prepaid Express.

Method of Shipment.—Shipping directions should be plainly written, and we urge our customers, in all cases, to use our order sheets. We shall be pleased to forward additional ones upon application. Kindly indicate whether shipment is to be made by freight, express or mail. When method of shipment is left to us, or when no directions are given, we will ship according to our best judgment, by such means as we believe to be in the best interests of our customers.

Our stock is well and carefully packed in paper-lined boxes and bales. For this, no extra charge is made, and neither time nor expense is spared in packing the trees in such shape that they will open up in good fresh condition.

Transportation at Purchaser's Risk and Expense.—All transportation charges are to be paid by the purchaser, and our responsibility ceases upon delivery, in good order, to forwarding companies; claims for losses or damages must be made upon the latter. We will, however, start a tracer for delayed shipments, if notified, and use every means at our command to secure prompt delivery, or recovery in case of damage or loss.

Shipping by Mail.—In ordering trees or plants for shipment by mail, add 15 per cent to the list price on the smallest size given, to cover cost of packing and postage. We cannot guarantee trees to come up to size specified in list, as only very small specimens can be sent in this way.

Time of Shipment.—Unless instructed otherwise, orders received during the shipping season will be forwarded as soon after their receipt as possible, and orders booked in advance will be shipped as soon as may be after the shipping season opens.

The Shipping Season.—November to March for all trees and plants. Citrus trees can, however, be shipped at any season of year, but summer shipments must be by express.

Selecting Varieties suited to locality is of the first importance, and can often be more advantageously done by ourselves than by purchasers. We are always glad to aid our customers in their selections, when so desired, and will, upon request, cheerfully furnish additional information in regard to the adaptability or desirability of particular varieties.

Substitution.—We desire to follow our customers' wishes in this respect, and have found that they generally wish us to substitute, to the best of our judgment, in case any varieties or sizes ordered are exhausted. We, therefore, substitute when necessary unless instructed to the contrary.

Printed Labels attached with brass wire to everything sent out.

We Guarantee all stock sent out to be well-rooted, well-grown, true to name, properly packed, and shipped according to instructions. Our liability under the foregoing guaranty is limited in amount to the original price received.

Claims.—If, by any possibility, errors should occur, they will be promptly rectified, if claim is made within ten days after the receipt of the goods.

Brief Hints on Tree Planting

Soil on which trees are to be set should be thoroughly prepared before planting. A crop of beggarweed, velvet beans or cowpeas grown on the land the previous season makes an excellent foundation. Plow and pulverize the ground well before planting.

Set stakes where the trees are to stand. Make the rows straight. The orchard will look better, and the trees will be easier to care for.

Dig the holes six inches deeper and wider than the spread of the roots.

When trees are received, open the boxes or bales and heel the trees in a shady place. Dig out a trench straight down on one side, sloping out to the ground level on the other, and deep enough to hold the roots of the trees. Place the trees in the trench side by side, cover the roots with earth and pack well around them.

Trees should not be left long, and are best heeled in only during the time of planting. **Do not allow the plants to be exposed to sun or wind at any time.** Keep them covered.

Prune off broken roots and cut back the tops if they have not already been cut back. Trees will start off much better if well pruned at time of planting.

Set trees at the same depth as they stood in the nursery rows. The earth marks on the collar can be taken as a guide. Use top soil for filling in the holes. **Pack the earth tight around the roots with the hands and fingers.** A pound of good commercial fertilizer thoroughly mixed in the earth with which the holes are filled can be used to good advantage. **Do not use stable manure in planting trees.**

If soil is dry, water may be used to advantage, a bucketful or more. Apply the water when the hole is three-quarters filled in. When the water has sunk away, fill in the remainder of the hole with earth, pack well and rake the surface, to leave the earth loose on top.

Citrus trees planted early should be banked with clean, dry soil about the buds, to protect them against cold. In dry weather it is an excellent plan to bank the trees with soil. They will grow off better.
